MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

eem MINIGLOSSARY POWER SUPPLIES

Ambient reference: Refers to the temperature of the still air surrounding the power supply

Case reference: One of the specs that make up the nominal rating. The temperature of the case with the temperature of the surrounding still air at a stated temperature (usually 25°C).

Crowbar circuit: Protects the load. A protective circuit that applies a short circuit across the output immediately upon overload. (See overvoltage).

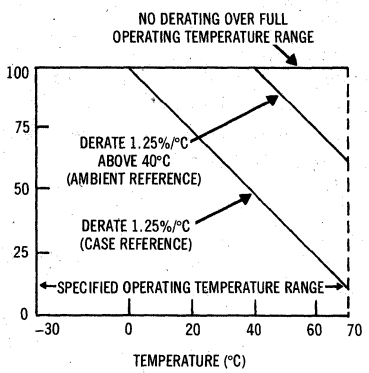

Fig. 1. Power output derating can be referred to ambient or case.

Derating: The degree output is reduced as temperature increases. Usually referenced to ambient case temperature and shown on a graph.

Efficiency: Ratio of the output power to the required input power. Usually expressed as a percentage given nominal environmental temperature.

EMI/RFI: Interference electronic circuitry caused by energy from electromechanical or radio frequency power supplies.

Foldback: Built-in protective circuits that automatically reduce the output voltage and/or current to very low levels in the event of an overload.

Holdover (Holdup): The interval that rated output will continue after input ceases. Usually milliseconds.

Input reflected current: The peak-to-peak alternating current generated by switching transients in DC/DC converters. Should not exceed 1%.

Inrush current limiting: Built-in circuits that monitor high currents through the rectifiers to the capacitors at turn ON. Circuit is usually inhibited as capacitors attain full charge.

Nominal rating: The spec value of the supply at stated conditions of input, output, and temperature.

Overshoot: A transient voltage change occurring during turn ON or OFF or during an abrupt load change.

Overvoltage (Overload) protection: Built-in circuits that protect the load or the supply by shutting it down or providing foldback.

Recovery: The time interval between the termination of an overload and restoration to normal operations.

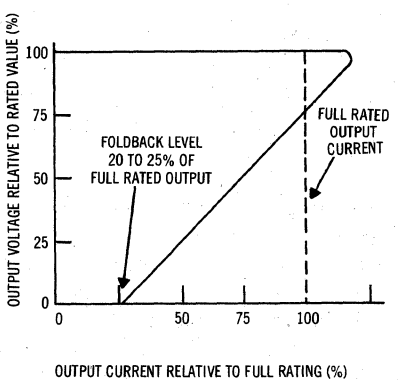

Fig. 2. Current foldback limiting self-resets with removal of fault.

Response: The time interval between a stated step change in input voltage or load current and return of output to normal operating conditions.

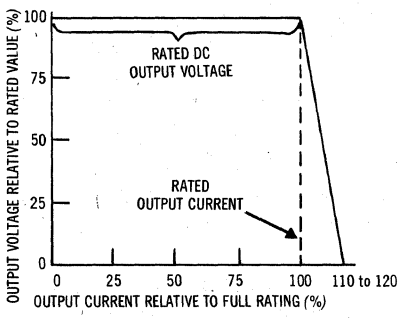

Fig. 3. Current limiting restrictions output current to a valve somewhat greater than full rated output; it resets when fault is removed.

Sensing: Regulation techniques that monitor output voltage and/or current. *Local sensing* refers to the output terminals. *Remote sensing* allows a feedback from the load circuit to the power supply.

Soft start: Allows the supply to start from zero current and/or voltage over a stated period of time during start up to prevent voltage overshoots and current imbalances.

Switchers: Power supplies using switching techniques to achieve high efficiency regulation. These techniques can have attendant EMI/RFI problems.

Tracking: The maintaining of fixed ratios between multiple outlets despite variations in line, load or temperature. Particularly important in supplies with symetrical (+)(−) outputs.

Transient protection: Circuitry designed to protect the supply from high amplitude line transients. Generally expressed in terms of peak voltage and maximum transient time duration.

NOMOGRAPH VOLTAGE DROP

NOMOGRAPH OF VOLTAGE DROP ACROSS LOAD SUPPLY LEADS
(as a function of wire size and load current)

THIS NOMOGRAPH CAN BE USED TO FIND:

Maximum current carrying capacity recommended for any standard wire size.*

1) With a straight edge, connect from the wire size on Scale 2 to the point "A" on Scale 3.
2) Read I_{max} on Scale 1.

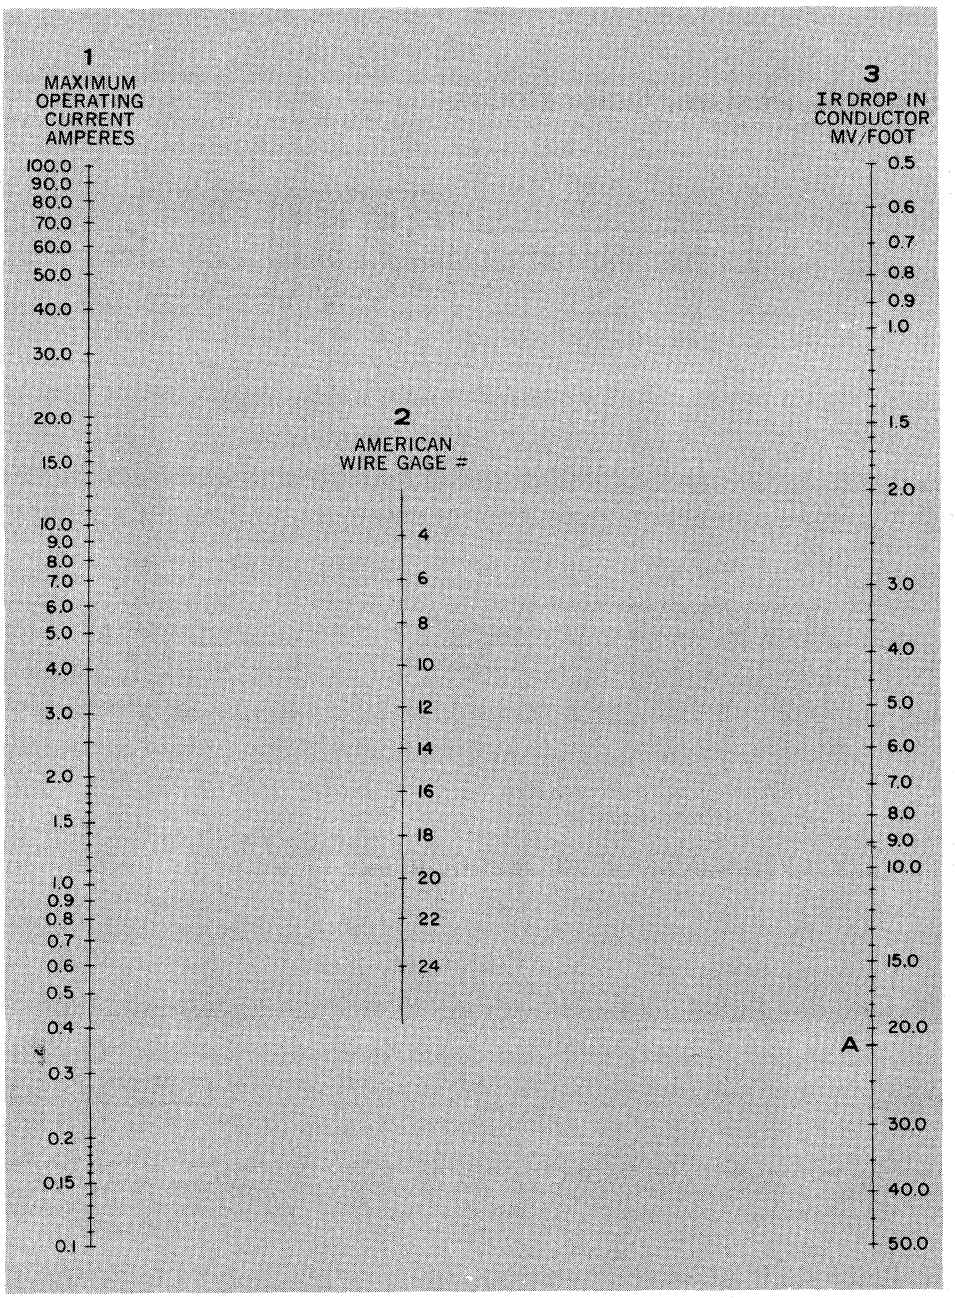
Voltage drop in millivolts per foot for known wire size and operating current.

1) With a straight edge, connect the known current on Scale 1 and the wire size on Scale 2.
2) Read voltage drop on Scale 3.

Wire size required for known operating current and known maximum tolerable voltage drop across supply leads.

1) Determine maximum tolerable drop in millivolts **per foot** of lead (sum of positive and negative leads).
2) Connect the value on Scale 3 (as determined in step 1) to the known current on Scale 1.
3) Read wire size on Scale 2.

** Based on an arbitrary minimum 500 circular mils per ampere. High-temperature class insulation will safely allow higher currents.*



NOTE: A voltage stabilized Power Supply controls the voltage across its output terminals. Hence, the wire conductors used to connect the load must be considered as part of the load. At high load currents, the voltage drop across the supply leads may appreciably degrade stablization at the load. Kepco models equipped with the *remote error sensing* feature can automatically compensate for voltage drops of up to 500 mV across each load supply lead.

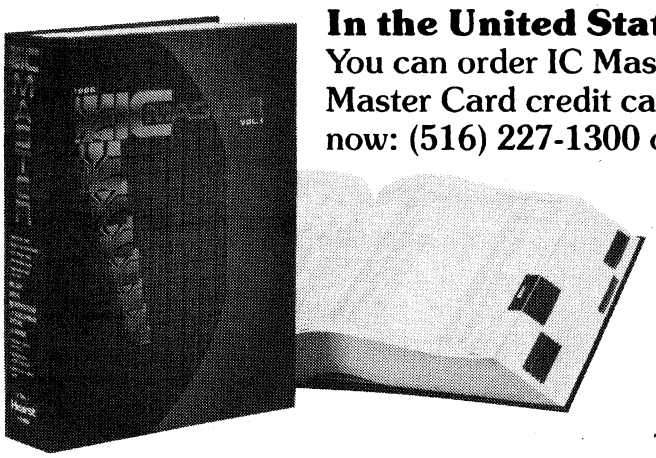
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

Or mail your order to

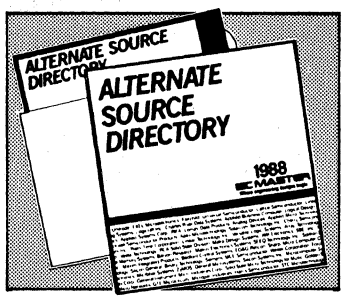
ICMASD...IC Alternate Source Directory

If you've used the IC MASTER, you know what the Alternate Source Directory is. Engineers tell us that it's one of the most valuable sections of the Master. The Alternate Source Directory...ASD...is now available in floppy disk form.



The electronic ASD is FAST! Just ask a question and the answer pops up in a split second.

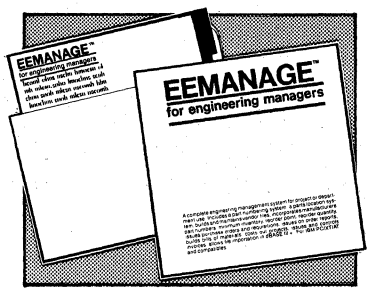
The electronic ASD is FLEXIBLE! You can add ICs and you can add comments.

You can add part numbers, prices, technical notes or anything else you like. You can customize the ASD to fit your needs and the needs of your company.

Order the 1988 Alternate Source Directory for your AT, XT or compatible. We'll send you two floppies and a very simple piece of printed documentation. Download the floppies and you're in business. All you need is a hard disk.

EEMANGE...for engineering managers

Developed by the publishers of EEM/ Electronic Engineers Master, EEMANAGE is a software program designed to make life easier for engineers and engineering managers.



EEMANAGE does many things: 1. Develops Bills of Materials 2. Assigns Part Numbers logically 3. Manages Engineering Inventories 4. Issues Purchase Requisitions 5. Relieves Engineering Inventories 6. Manages a Parts Storage System 7. Issues Engineering Change Notices 8. Interfaces with dBaseIII+ Programs.

EEMANAGE is completely menu driven. It is simple to understand and operate. Any competent secretary can be up and running on EEMANAGE in minutes.

Order EEMANAGE for your AT, XT or compatible. We'll send you one floppy and brief, very user friendly documentation.

The basic price for ICMASD or EEMANAGE is $149.50 each and includes floppy disk(s) and complete program documentation.

For immediate shipment you can order ICMASD or EEMANAGE on your VISA or MasterCard credit card simply by calling Marie Botta at (516) 227-1300.

ATC Multilayer UHF/Microwave Porcelain & Ceramic Chip Capacitors

ATC 100 Superchips™

HIGH VOLTAGE RATINGS

in the same small package. As the result of a tremendous number of test hours at high DC applied voltage, the ATC 100 Case A (approximately 55 mils sq.) is now available at a rated working voltage of 150 volts. The Dielectric Withstanding Voltage (DWV) is tested at four times the working voltage, or 600 VDC. The actual internal Dielectric Breakdown Voltage (DBV) is at least 1500 VDC. This new rating far exceeds that of any capacitor of equal physical size. These voltages are verified by test data obtained at ATC's Government-approved Hi-rel testing facility, and have been confirmed by various customers.

ULTRA HIGH Q

is characteristic of the ATC 100 capacitors through microwave frequencies, even at high ambient temperatures, and under extremely high currents, permitting reliable operation at high power levels. Output power increases of greater than 20% per stage are reported when ATC 100's, with their negligible I^2R losses, are substituted for conventional capacitors. The reduction of losses also produces greater DC-to-RF conversion efficiency, improvements of 35% being reported. Improvements in Noise Figure are also attainable in receiver applications.

HIGH-POWER

operation through microwave frequencies. Extremely low Equivalent Series Resistance (ESR) and high dielectric strength permit 15 KW pulse operation (900 watts average) at 500 MHz (3000 volts, 17 amps RF) in a 50 ohm system. Other typical applications are 500 watts (CW) at 1 GHz and 1 KW (avg.) at 50 ohms up to 3 GHz.

LOW NOISE FIGURE

in receiving systems is achieved by the very low equivalent series resistance and extremely high Insulation Resistance (I.R.) of the ATC 100's. In an RF preamplifier, their low ESR helped attain a N.F. of 1.4 dB with a 1.2 dB transistor N.F. at 500 MHz. The high Insulation Resistance (ultra-low leakage) of an ATC 100 used as a calibration capacitor at the input of a charge storage amplifier on an X-Ray Spectrometer made possible a threshold sensitivity of 150 eV.

HIGH SELF-RESONANCE

is shown by test data taken on a Hewlett Packard 8542A Network Analyzer covering S-Parameters, VSWR, Reactance, and Insertion Loss over the frequency range of 100 to 3000 MHz. Request **THE RF CAPACITOR HANDBOOK** for actual S-Parameter computer print-outs.

ULTRA-STABLE PERFORMANCE

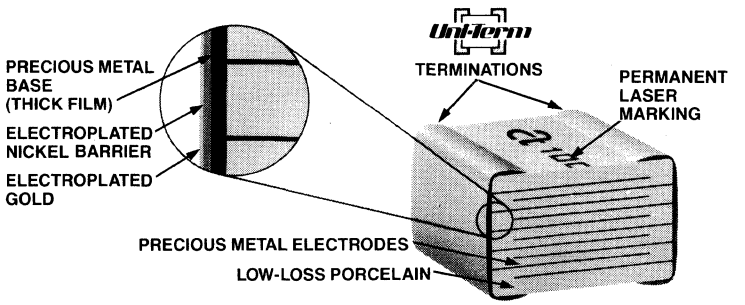
is assured by the self-encapsulating porcelain construction. ATC 100 **Superchips**™ provide absolute retrace, no measureable drift, and complete stability under extremes of voltage, frequency, time and temperature. They are ideal for high-power, high-current, tuning or impedance-matching applications.

ATC performs Evaluation Tests on **every** lot manufactured. This includes cross-section analysis, complete electrical and RF testing and characterization, and mechanical and pull strength testing on a randomly selected sample group.

Structure

SELF-ENCAPSULATING PORCELAIN CONSTRUCTION

Precious metal internal electrodes are molecularly bonded and sealed in a monolith of non-porous porcelain. The ATC 100 **Superchip**™ is a hermetic, microminiature, self-encapsulated, high voltage, porcelain chip capacitor matched to the thermal coefficient of expansion of commonly used substrate materials.



Military Products

American Technical Ceramics is QPL Listed for UHF/Microwave Capacitors in MIL-C-11272/16, /17 and /18 since May 25, 1973, and for established reliability UHF/Microwave Capacitors in MIL-C-55681/4 and /5 since August 3, 1977.

For MIL-C-11272/16, /17 and /18, the QPL List includes styles CY81 through CY89 (ATC 100 Series).

For MIL-C-55681/4 and /5, the QPL List includes BG (90 ± 20 PPM/°C) characteristic (ATC 100 Series), and BP (0 ± 30 PPM/°C) characteristic (ATC 700 Series). Styles CDR 11, 12, 13, 14, and 21 through 25 are available in both the above characteristics.

For MIL-C-55681/4 and /5, the QPL List includes the following terminations:

M – Palladium Silver (CDR 11, CDR 13)

*N – Gold over Nickel over Silver (ATC's UNI-TERM® Termination), (CDR 11, CDR 13)

S – Solder Coated, Final (CDR 12, CDR 14, CDR 23, CDR 25)

T – Silver (CDR 21, CDR 22, CDR 24)

*U – Solder Coated, Nickel Barrier (ATC's BARRIER/CAP® Termination) (CDR 12, CDR 14)

*"N" and "U" are preferred terminations for best solderability, thermocompression bonding, leach and migration resistance, and shelf life for chips and pellets.

ATC has complete Government approved Hi-Rel testing facilities as well as RF production testing capability through 18 GHz.

ATC's Military Product Manual includes a correlation between ATC sizes and lead styles and MIL-C-11272 and MIL-C-55681 sizes and styles.

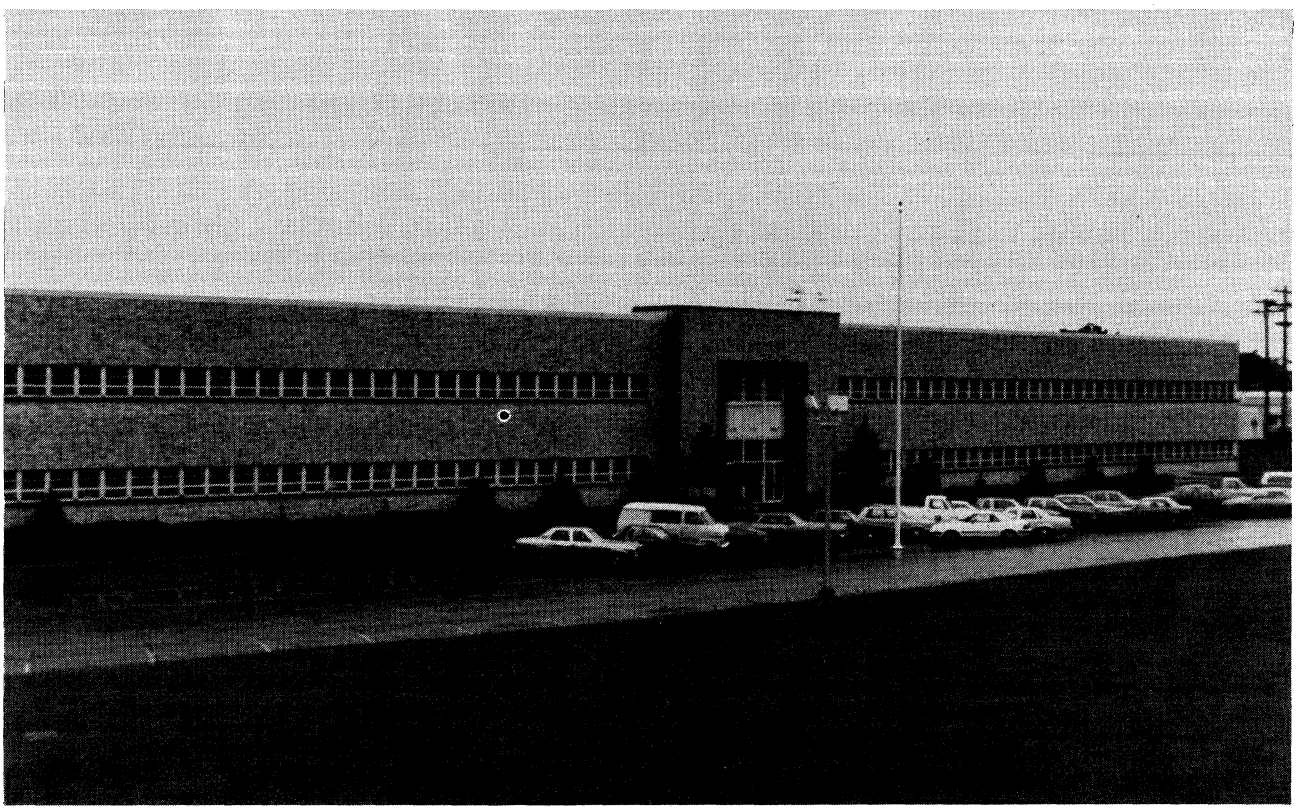
CAPACITORS
Wound Film Capacitors



AT&T's Nashville Plant

AT&T wound film capacitors are among the finest in the industry. They offer unsurpassed quality and reliability, proven by the billions of units in widespread use throughout our telephone systems.

Our miniature metallized film designs are characterized by a benign failure-mode operation—to fail open rather than short. The designs include axial, radial, and 2-pin DIP configurations. One of our most prominent models, the 2-pin DIP, is an epoxy-molded, machine-insertable capacitor whose design is so advanced that another leading capacitor vendor has licensed the manufacturing rights from us. This capacitor is particularly well-suited for bypass applications where high-component packing densities are required.

AT&T also manufactures a variety of other high-quality wound film capacitors, including standard-size axial and radial types. Capacitor networks, which are a laser-generated series of capacitor and resistor elements, and CAP-PAKs, which provide custom tailoring for any multicapacitance need, are also available.

A special series of standard reliability capacitors are offered for use in applications with moderate life expectancies. The capacitors, designated as N-Series, are offered in addition to the line of high-reliability products. The addition of a prefix "N" differentiates these units from the high-reliability series (e.g., N75G.10UF vs. 75G.10UF).

Traditional AT&T quality standards are maintained, monitored by the regular performance of rigorous dry life and humidity resistance tests. The units are dimensionally compatible with their high-reliability counterparts, while meeting or exceeding the specifications for similar capacitors produced by various manufacturers.

Our engineering support services accentuate our product offerings. We provide superb applications engineering services and a willingness to develop custom designs to meet the unique needs of our customers. Our engineers at the Nashville plant where AT&T capacitors are manufactured welcome the opportunity to work with our customers to design components that meet their application needs.

MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

VOLTAGE TEMPERATURE SCANNING FOR CAPACITOR FAULTS

SCREENING FOR LOW VOLTAGE MOMENTARY BREAKDOWNS

In recent years some concern has arisen over the use of metallized polycarbonate capacitors in low voltage applications. The cause for this concern is due to a phenomenon existing in these capacitors known as "momentary breakdown." Testing in our laboratories has shown that other metallized dielectrics such as polypropylene, polysulfone, and polyester exhibit this same failure mode, as well. In addition, screening done by Component Research Company on a number of hi-rel ceramic capacitors has shown similar failures.

Programs such as Atlas and Voyager have experienced capacitor failures which have been attributed to momentary breakdown. These costly failures have demonstrated a real need for further investigation into this phenomenon.

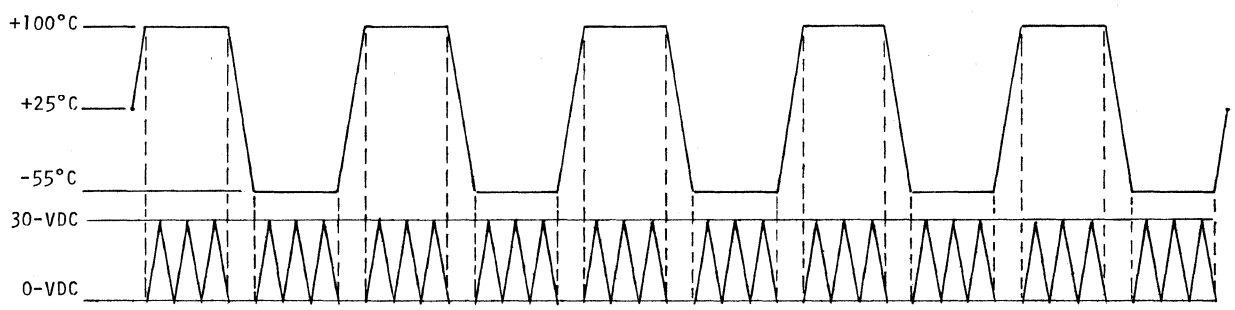
Component Research Company as a manufacturer of established reliability plastic film capacitors has been involved in screening capacitors for momentary breakdown since its involvement in the Viking program in 1973.

Considerable work has been done to develop effective screening methods to eliminate those capacitors that will possibly exhibit momentary breakdown. Component Research Company has developed various screening methods to cull out those capacitors which can exhibit a possibility of momentary breakdown.

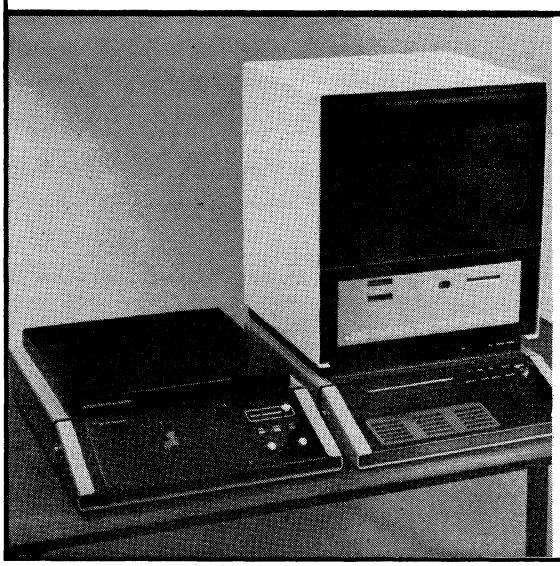
As a result a new military specification, MIL-C-87217, has been established to define screening procedures to be performed for applications in which momentary breakdowns cannot be tolerated.

Please contact our application engineers for assistance in choosing the suitable capacitor and screening procedure for your requirement.

TYPICAL VOLTAGE/TEMPERATURE RAMP SCREENING CYCLE



Stabilize capacitors at at temperature extremes and voltage ramp 3 times 0 to 30VDC and 30 to 0VDC while monitoring for leakage current.



This General Radio model 2230 Component Test System is used in conjunction with CRC specially designed ramp generators, cycling chambers, and interface equipment for voltage/temperature capacitor fault-scanning.

1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.

1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.

1. THE COMBINED DC AND AC VOLTAGES SHOULD NOT EXCEED THE DC RATINGS, SEE FIGURE.
2. CAPACITORS MAY BE OPERATED AT HIGHER FREQUENCIES, AT REDUCED RMS VOLTAGE SUCH THAT MAX. AC CURRENT RATINGS ARE NOT EXCEEDED.
3. CAPACITORS CAN HANDLE PULSE CURRENTS UP TO 100 TIMES GREATER THAN THE PEAK CURRENTS CALCULATED FROM THE RATED RMS RATING (PROVIDED SLOW REPETITION RATES ARE USED). IF THERE IS ANY DOUBT, A SKETCH OF THE VOLTAGE AND CURRENT WAVE FORMS WITH TIME BASE SHOULD BE SENT TO CRC FOR ANALYSIS.

B52 FOIL POLYCARBONATE CAPACITOR

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED FROM −65°C TO +100°C

Series B52 capacitors are designed for continuous duty operation over the full temperature range from −65°C to +100°C at the rated voltage, current and frequency.

The maximum RMS current or peak current can be exceeded with reduced duty cycle or tone burst operation, provided the peak rated voltages are not exceeded, and provided the heat rise measured at the terminals and within ¼" of the hermetic seals does not exceed 20°C.

Heat rise is measured with the capacitor located in a room temperature environment allowing for non-cooled normal convection. Lead size and distance to the power source must be adequate to prevent undue heat sinking or heat generation during measurement.

HIGH CURRENT HANDLING WITH LOW LOSS

Series B52 capacitors have very low series resistance terminations, measuring in the range of several milliohms at 100KHz, and can handle very high peak current discharge currents. Typically it is estimated that a 1uF capacitor can handle over 3000 amperes of peak current at repetition rates up to 10 pulses per second. Testing is now in process to develop meaningful pulse current limits to be added to future specifications for B52 capacitors.

FREEDOM FROM CORONA INCEPTION AND INTERNAL HOT SPOTS

CRC capacitors use a patented low loss termination which remains reliable after years of operation under severe environmental conditions. Whereas commercial type AC rated capacitors may be adequate for 60Hz and possibly 400Hz long term life, the use of CRC terminations enables these capacitors to operate up to 40KHz without abnormal hot spot conditions of corona inception.

40KHz RATED FOR HIGH CURRENT HANDLING UP TO 100°C

CRC capacitors will operate efficiently up to approximately 400KHz at their maximum current rated conditions. Typically a capacitor that is 1uF and is rated at 10 amps at 40KHz will be handling 40VRMS at 40KHz. This capacitor when operated at 400KHz at 4VRMS will handle approximately 10ARMS current.

CRC has higher frequency, lower loss, higher power capacitors in the planning stage for future applications that seek for higher frequency power sources.

HERMETICALLY SEALED, RUGGED AEROSPACE, MILITARY CONSTRUCTION

CRC true hermetic sealing preserves the high quality performance of Series B52 polycarbonate capacitors and protects the dielectric materials from chemical attack. Merely potting non-hermetic type capacitors is poor insurance against long term loss of dielectric strength and life. It has been found that attack by vapor ingestion of chemicals of non-hermetic polycarbonate capacitors has resulted in failure in life or long term operation.

AVAILABLE WITH 400Hz OR 40KHz BURN-IN OPTIONS

ORDERING INFORMATION: All part numbers listed in tables have a capacitance tolerance of ±10% and are supplied with bare metal (unsleeved) cases.

TECHNICAL INFORMATION: These capacitors can be damaged when you solder to the lead wires due to possible overheating that can occur. Place a suitable heat sink on the lead wire between the solder beads on the hermetic seal and the area of wire lead to be soldered.

For initial design, when operating the capacitors at high current levels it is suggested that you monitor the capacitor heat rise on the leads adjacent to the solder beads to verify that it does not exceed 20°C above ambient.

All maximum current ratings shown should result in less than 20°C heat rise with continuous duty operation under normal convection conditions.

Avoid tearing of solder beads when bending wire leads by using a suitable clamping fixture for lead bending.

B12 METALLIZED POLYCARBONATE CAPACITOR

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED FROM −65°C TO +100°C

Series B12 capacitors are designed for continous duty operation over the full temperature range from −65°C to +100°C at the ratings for voltage, current and freguency listed in the specifications.

The maximum RMS current or peak current can be exceeded with reduced duty cycle or tone burst operation, provided the peak rated voltages are not exceeded, and provided the heat rise measured at the terminals and within ¼" of the hermetic seals does not exceed 20°C.

Heat rise is measured with the capacitor located in a room temperature environment allowing for non-cooled normal convection. Lead size and distance to the power source must be adequate to prevent undue heat sinking or heat generation during measurement.

HIGH CURRENT HANDLING WITH LOW LOSS

Series B12 capacitors have terminations slightly higher in resistance than Series B52 capacitors and can be used in pulse applications where the peak currents generally do not exceed 100 times B12 RMS current ratings and where the repetition rate is less than 10 pulses per second.

Testing is now in process to develop pulse current limits to be added to future specifications for B12 capacitors. Series B12 capacitors are smaller in size and lighter in weight than Series B52 foil polycarbaronate capacitors.

FREEDOM FROM CORONA INCEPTION AND INTERNAL HOT SPOTS

Commercial type AC rated capacitors may be adequate for 60Hz and possibly 400Hz long term life. CRC capacitors are designed to operate up to 40KHz without abnormal hot spot conditions, without corona inception, with constant controlled low loss terminations which remain reliable after years of use, after operation during severe environmental conditions.

40KHz RATED FOR HIGH CURRENT HANDLING UP TO 100°C

CRC capacitors will operate efficiently up to approximately 400KHz at their maximum current rated conditions. Typically a capacitor that is 1uF and is rated at 10 amps at 40KHz will be handling 40VRMS at 40KHz. This capacitor when operated at 400KHz at 4VRMS will handle approximately 10ARMS current.

CRC has higher frequency, lower loss, higher power capacitors in the planning stage for future applications that seek for higher frequency power sources.

HERMETICALLY SEALED, RUGGED AEROSPACE, MILITARY CONSTRUCTION

CRC true hermetic sealing preserves the high quality performance of Series B12 polycarbonate capacitors and protects the dielectric materials from chemical attack. Merely potting non-hermetic type capacitors is poor insurance against long term loss of dielectric strength and life. It has been found that attack by vapor ingestion of chemicals of non-hermetic polycarbonate capacitors has resulted in failure in life or long term operation.

AVAILABLE WITH 400Hz OR 40KHz BURN-IN OPTIONS

AC burn-in options at additional cost are available for critical applications. Most economical AC burn-in is generally at rated RMS volts at 400Hz at 100°C. 40KHz burn-in at maximum rated current is also available for those applications where long term use at high current is anticipated. 100% Group "A" testing of vital capacitor characteristics is performed after burn-in to generally tightly controlled specifications to assure ourselves and our customers that these capacitors will operate reliably as intended for use.

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED FROM −55°C TO +85°C (HIGHER RATINGS AVAILABLE)

Series B55 capacitors are designed for continuous duty operation over the full temperature range from −55°C to +85°C at the rating for voltage, current and frequency listed in the specifications.

The maximum RMS current or peak current can be exceeded with reduced duty cycle or tone burst operation, provided that peak rated voltages are not exceeded, and provided the heat rise measured at the terminals and within ¼" of the hermetic seals does not exceed 20°C.

Heat rise is generally measured with the capacitor located in a room temperature environment allowing for non-cooled normal convection. Lead size and distance to the power source must be adequate to prevent undue heat sinking or generation during measurement.

HIGH CURRENT HANDLING WITH LOW LOSS

Series B55 capacitors have very low series resistance terminations, in the range of several milliohms at 100KHz, and can handle very high peak current discharge currents. Typically it is estimated that a 1uF capacitor can handle over 3000 amperes of peak current at repetition rates up to 10 pulses per second. Testing is now in process to develop meaningful pulse current limits to be added to future specifications for B55 capacitors.

ORDERING INFORMATION: All part numbers listed in tables have a capacitance tolerance of ±10% and are supplied with bare metal (unsleeved) cases.

TECHNICAL INFORMATION: These capacitors can be damaged when you solder to the lead wires due to possible overheating that can occur. Place a suitable heat sink on the lead wire between the solder beads on the hermetic seal and the area of wire lead to be soldered.

For initial design, when operating the capacitors at high current levels it is suggested that you monitor the capacitor heat rise on the leads adjacent to the solder beads to verify that it does not exceed 20°C above ambient.

All maximum current ratings shown should result in less than 20°C heat rise with continuous duty operation under normal convection conditions.

Avoid tearing of solder beads when bending wire leads by using a suitable clamping fixture for lead bending.

Component Research CRC

B15 METALLIZED POLYPROPYLENE CAPACITOR

SPECIFICATIONS & QUALITY CONFORMANCE

400VRMS, 600VRMS, RATED −55°C TO +85°C

Series B15 metallized polypropylene capacitors have lower loss than Series B14 metallized polysulfone capacitors and therefore are superior for power resonating applications requiring minimum loss. The B15 capacitors are however limited for use in 85°C or lower temperature applications. CRC can supply special high temperature low loss teflon capacitors for 200°C power resonating applications if required.

When Series B15 specifications are completed, RMS ratings above 600VRMS will be available together with information covering this product line.

LOW LOSS, HIGH Q, LIGHT WEIGHT, HIGH POWER RATED, HERMETICALLY SEALED

The B15 capacitors are lighter in weight than any other hermetically sealed capacitor with equivalent current and voltage ratings at 40KHz. Typically a 5.6uF, 400VRMS, capacitor in a 1.25″ x 3.440″ case weighs approximately 110 grams and is rated to handle 35 amps at 40KHz.

Polypropylene film like many other dielectrics is affected by chemical attack of solvents, epoxies and contamination. True hermetic sealing of CRC's capacitors protects them from outside chemical attack and assures that long term high quality performance can be maintained.

RUGGED LOW LOSS TERMINATIONS FOR 100% DUTY CYCLE OPERATING LIFE

The large amount of power that B15 capacitors can handle is a result of years of development searching for all possible means of reducing capacitor losses and preserving the integrity of CRC's rugged capacitor terminations. When CRC's metallized polypropylene capacitors are subjected to temperature extremes, they surpass commercial type products in their ability to maintain a constant low loss equivalent series resistance and can maintain their low power factor for critical aerospace applications. Where extremely high pulse currents may be encountered Series B55 should be considered.

AC RATED TO 40KHz UP TO 85°C

Series B15 capacitors are rated up to 40KHz and are ideal for power resonating circuits. Due to a negative temperature coefficient of approximately 200 PPM/°C a 10°C temperature increase due to applied power or applied temperature will cause the capacitance to decrease approximately 0.2%.

AVAILABLE WITH AC BURN-IN AND OTHER SCREENING OPTIONS

CRC manufactures larger capacitors of similar construction to the B15 series in rectangular cases for power inverter applications requiring low loss filtering of several hundreds of amperes of ripple at frequencies 20KHz and higher.

Further developments in lowering capacitor losses are currently being completed at CRC and will result in further improved ratings for B15 and other new model capacitors.

ELECTRONIC CONCEPTS INC.

TYPE 5MP SWITCH-MODE POWER SUPPLY CAPACITORS METALLIZED POLYPROPYLENE

Type 5MP capacitors have been developed by Electronic Concepts for use in switching power supplies. These metallized polypropylene capacitors are manufactured by using special techniques in order to achieve the optimum characteristics for high current, high capacitance, low ESR applications.

For filter designs where capacitance of 50 mfd or less is suitable for the circuit, type 5MP affords the opportunity to improve general system design. These unique capacitors also exhibit none of the "roll-off" of capacitance with frequency often associated with electrolytics.

In addition to the features which make type 5MP particularly suitable for switching applications, they are also characterized by low losses. Other advantages of polypropylene are long-term stability, retrace, low dielectric absorbtion, and high insulation resistance.

INTERNAL CONSTRUCTION

Extended foil winding (non-inductive)

ENCLOSURE

Mylar tape outerwrap

ENVIRONMENTAL

These capacitors shall meet or exceed the requirements of MIL-C-55514 for all the following:

Vibration	(Para. 3.16)
Immersion	(Para. 3.21)
Shock	(Para. 3.17)
Moisture Resistance	(Para. 3.22)
Life	(Para. 3.23)

Electronic Concepts, Inc. is qualified as a supplier for the MIL versions CFR13 and CFR14 capacitors. These capacitors are manufactured to meet the requirements of MIL-C-55514/9. MIL designations are shown in the table above. The last two characters of the MIL designations (CFR13ALB106 - -) specify capacitance tolerance and failure rate respectively (CFR13ALB-106KM).

Capacitance tolerance: M = 20%, K = 10% and J = 5%.

Failure rate level: M, F, R or S

TYPE 5MC SWITCH-MODE POWER SUPPLY CAPACITORS METALLIZED POLYCARBONATE

A new innovation pioneered by Electronic Concepts, Inc. leads the way to a new era of miniature metallized polycarbonate film capacitors physically designed to minimize circuit board real estate in switch mode power converters while maintaining a low ESR, excellent ripple capability and high resonant frequency. Electronic Concepts offers, in addition to conventional axial leaded termination, a flat tinned copper tab termination for increased current carrying capability and higher resonant frequency.

To aid the best layout potential, the copper tab terminated version is offered in both high and low profiles for each capacitance/voltage rating.

Excellent electrical characteristics and super miniaturization are offered to switch mode power supply designers with his requirements in mind.

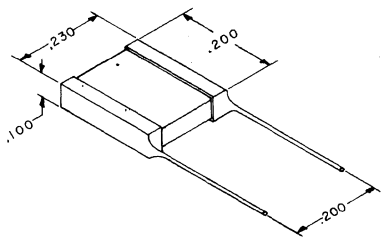
MINIATURE HERMETICALLY SEALED POLYCARBONATE

TYPE HECR

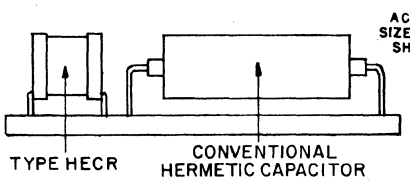


THE FIRST POLYCARBONATE TO OFFER SUBMINIATURE SIZE AND HERMETICITY

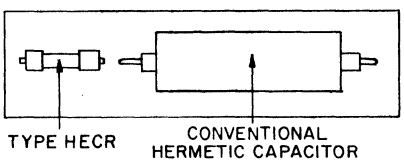
The Avionicap® HECR represents a major improvement in capacitor design that will advance the trend toward miniaturization. This improvement is made possible by a new, patented manufacturing process that enables us to maximize density and actually compress the capacitance of a conventional hermetic capacitor into a subminiature package. Type HECR is the smallest hermetically sealed polycarbonate capacitor on the market today, measuring as compact as .100″ × .200″ × .230″, which is 3.5 times smaller in volume than conventional hermetic polycarbonate capacitors. The HECR represents a competitive edge to the user, because it is the first time both subminiature size and hermeticity are available in a polycarbonate capacitor.

OFFERS GREATER DESIGN LATITUDE WITHOUT COMPROMISE

It is no longer necessary for the designer to compromise because of lack of availability. Before the introduction of the HECR, the choice was between using either a larger than ideal hermetic or a non-hermetic in a small enough size. But now the designer can have both miniature size and hermetics — and as a result, he can miniaturize without compromising performance, reliability or environmental protection requirements.



SIDE VIEW



TOP VIEW

NO LOSS IN ELECTRICAL CHARACTERISTICS AS COMPARED TO CONVENTIONAL HERMETICS

Even though the size of the HECR has been reduced, performance has not been. The HECR still offers excellent stability retrace and insulation resistance, long term capacitance stability, and capacitance as high as 1.0 MFD. There is full hermeticity in accordance with MIL-C-202, method 112. And it meets the environmental and performance standards of MIL-C-83421, as well as other military and commercial standards.

LENDS ITSELF TO END PRODUCT MINIATURIZATION — WITH GREATER PCB DENSITY

Because of its subminiature size the HECR will save valuable printed circuit board surface area and volume, thus allowing for a smaller pc board, and therefore more boards packaged in a specified area. In addition, this capacitor has a rectangular rather than a tubular shape, and is radially rather than axially mounted. As a result the surface area requirement is even further reduced.

The HECR facilitates miniaturization of the component package and the end product, to reduce system weight and production costs.

ELPAC COMPONENTS 28 YEARS OF EXCELLENCE

FILM CAPACITORS MADE EASY

Elpac's film capacitors offer high quality at competitive prices. They are typically available from 0.0001 to 25 microfarads at voltages from 50 to 1,000 VDC with temperatures up to 125°C (teflon is good up to 200°C). Film capacitors are non-polarized and are noted for their low leakage and capacitance stability over variations in voltage, frequency, and temperature. They also provide excellent volumetric efficiency at higher voltage ratings (over 100 volts), and are applicable to high energy filter applications because of their extremely low DF and exceptionally low ESR (the lowest of all capacitor dielectrics). Film capacitors are typically utilized in test and measurement instruments, telecommunication equipment, industrial control systems, and computers or computer peripherals.
. . . Available in five standard dielectrics.

POLYESTER

This dielectric is the most popular of all film capacitors due to its very low cost. It is available in both metallized and film-and-foil configuration and in values ranging from .001 to 25 microfarads. Polyester capacitors offer capacitance stability over temperature (−55 to +125°C) and a low dissipation factor (DF). In the metallized configuration, they provide the best volumetric efficiency (smallest size) of all film capacitors. Additionally, they are highly reliable due to the self-healing quantities of the metallized dielectric. They are typically used in RF (radio frequency) filtering applications and offer advantages in low frequency (less than 400 Hz) AC circuits where high energy currents are present.

POLYCARBONATE

This dielectric is also popular, especially for applications where it is desirable to maintain a minimum capacitance change over temperature or where lower DF, lower D.A. or high I.R. is important. Polycarbonate capacitors are slightly more expensive than polyester and are available as metallized units in values ranging from 0.001 to 25 microfarads. Their volumetric efficiency approaches that of polyester. They are typically used in timing or frequency determination circuits where precise capacitance tolerance up to a full temperature rating of 125°C is important.

POLYPROPYLENE

This dielectric is available in a metallized or film-and-foil configuration, in values from 0.0001 to 10 microfarads. Polypropylene capacitors exhibit a near linear negative temperature coefficient, excellent insulation resistance and lower DF and dielectric absorption than polycarbonate, but are limited to a maximum temperature of +105°C. They are typically used for high impedance coupling, A-D converters, sample and hold applications and in tuning and timing circuits. They are also utilized in high frequency AC filter applications where their very low DF (and low ESR) yields excellent filtering with minimal self-heating. They are particularly suited for high current, high frequency switching applications such as switching regulator power supplies.

POLYSTYRENE

This dielectric is available from Elpac in film-and-foil configurations only, in values ranging from 0.0001 to 2 microfarads. These capacitors exhibit superior capacitance stability and DF over temperature, but only up to 85°C and in capacitance values less than 2 microfarads. They have broad application to most circuit requirements and in large quantities (greater than 25,000 units) are very inexpensive due to Elpac's off-shore manufacturing facility.

TEFLON

This dielectric is available from Elpac as either metallized or film-and-foil and in values of 0.001 to 1 microfarad. Teflon capacitors are particularly noted for their performance at high temperatures (up to 200°C) and exhibit the best capacitance stability and DF of all film capacitors, over a full temperature range of −55 to +200°C. They are the most expensive of all film capacitor types. They exhibit moderate volumetric efficiency and have typical applications in "down-hole" (petroleum exploration) equipments, military equipments or other high temperature situations.

AC APPLICATIONS

Both polyester and polypropylene film dielectrics are particularly suited to AC circuit applications. At lower frequencies (less than 400 Hz), metallized polyester provides an excellent filter at a small size, especially where high energy currents are present. At current levels greater than approximately 20 amps, a polyester film-and-foil configuration is preferred to improve the current carrying capacity of the conductor and to provide a better cooling path (the foil) for the heat generated by the AC current. For AC applications at frequencies higher than 400 cycles, a metallized polypropylene dielectric will usually be more appropriate since its very low DF (and low ESR) provides excellent filtering with minimal self-heating.

HIGH RELIABILITY

All of the listed film dielectrics can be provided in high reliability configurations for the most demanding applications, including MIL-STD requirements. Some of these applications are best met by a rectangular or tubular hermetic seal configuration with certification of all required Group A and B testing. Additionally, Elpac produces precision capacitors to ±1% or less tolerances, or in matched sets.

CUSTOM EMI/RFI FILTERS

Elpac manufactures a broad range of custom EMI/RFI filters which can be found in most commercial and military aircraft, including the NASA Space Shuttle. In avionics and space applications, it is often necessary to develop custom designs that provide the required EMI protection with a minimum of weight and volume. This is usually accomplished by packaging the required electronic components and circuitry into an enclosure specially configured for optimum space utilization. In most instances, these filters have been designed by the system designer or through a joint effort between the system designer and Elpac.

CUSTOM APPLICATIONS

Elpac offers a highly trained engineering staff and fully equipped test laboratory to provide customer applications assistance as near as your telephone. During the past 28 years, our capacitor specialists have provided such assistance to thousands of customers to solve their capacitor needs in the most efficient and cost effective manner.

HIGH VOLUME, LOW-COST MANUFACTURING

Elpac compliments its Santa Ana, California manufacturing facility with an off-shore manufacturing site to offer all of the above dielectrics (except teflon) in very high quantities at a low unit cost. Best of all, these products are supported by our Santa Ana, California engineering staff and test laboratory to provide local support throughout the United States for all capacitor and filter product lines.

DESIGN AND APPLICATION FEATURES

1. A flat top surface for vacuum pick up — compatible with high volume insertion equipment.
2. Regular molded shape — guarantees accurate transfer and placement during insertion.
3. High density packaging on 8 mm and 12 mm blister tape, available on 7″ and 13″ reels.
4. Glue pad on underside of component allows consistent, strong bonding to circuit board prior to soldering.
5. Guaranteed termination dimensions — allows reliable pad design and consistent "fit" to pad — eliminates "tombstoning" or "jumping-bean" effects, and reduces "rotational" effects considerably.
6. Compliant terminations — thermomechanical stresses during operation and mechanical stresses during equipment servicing **not** transferred to component.
7. Rugged construction prevents damage during mounting and ensures compatibility with all systems for soldering (infra-red, solder wave, solder reflow).
8. Resistant to flux removal solvents and solvent systems used with vapor phase soldering.
9. All parts are indelibly laser coded on uppermost surface with videcon-readable polarity mark.

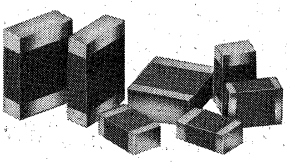
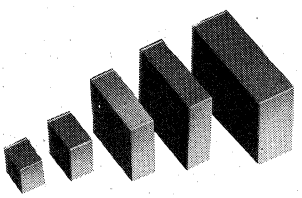
Ultra High Capacitance Chip Capacitors



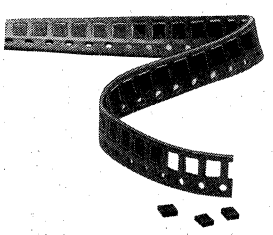
Fourteen configurations are available in four basic dielectrics: NPO/COG, BX/X7R, Z5U, and Y5V characteristics, to meet MIL-C-55681A and EIA 198B specifications. Capacitors feature high volume efficiency of capacitance, and are ideal for hybrid circuit applications.

High Voltage Chip Capacitors



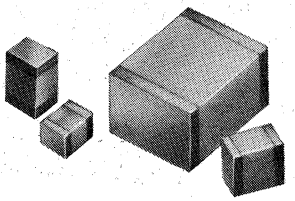
Available in either NPO/COG or BX/X7R dielectric, these units are designed to obtain high voltage values to 4000 VDCW. Typical applications include high voltage power supplies and voltage multiplier circuits.

Multilayer Ceramic Chip Capacitors on Tape & Reel



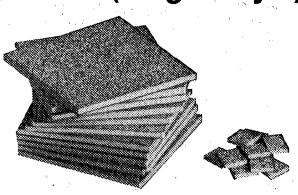
Ceramic chip capacitors designed for automatic placement on ceramic substrates on printed circuit boards in high volume surface mounted applications. Offered in three sizes R15, R18 and S41 they are suited for use with all the popular automatic placement systems. Available in 8mm tape on reel. Larser size units can be provided on 12mm tape on reel.

High Q Microwave Chip Capacitors



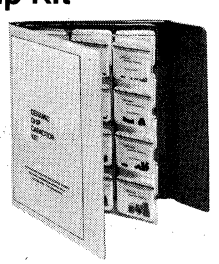
High Q microwave chip capacitors are available in four basic sizes, displaying excellent performance in the VHF, UHF and microwave ranges. The configuration, insertion loss and resonance-free performance make these chips ideal for microstrip and hybrid MIC applications.

Ceramic Capacitor Wafers (Single Layer)



Ideally suited for micromodule and miniature hybrid integrated circuits where low profile requirements preclude the use of conventional multilayer chip capacitors. These units are used as bypass, coupling and filtering elements, (to 18GHz in microwave applications). Custom configurations are also available for high voltage applications to 15 KV.

Chip Kit



Designer kits contain standard size chips in popular capacitance values and dielectric characteristics with palladium silver terminations. Kits are supplied in a special vinyl cover for convenient shelf storage with each chip value individually packaged for easy acesss. Available with NPO/COG dielectric No. S-900, BX/X7R and Y5V dielectric No. S-905 ceramic capacitor wafers (single layer) No. S-910 and High Q S-915.

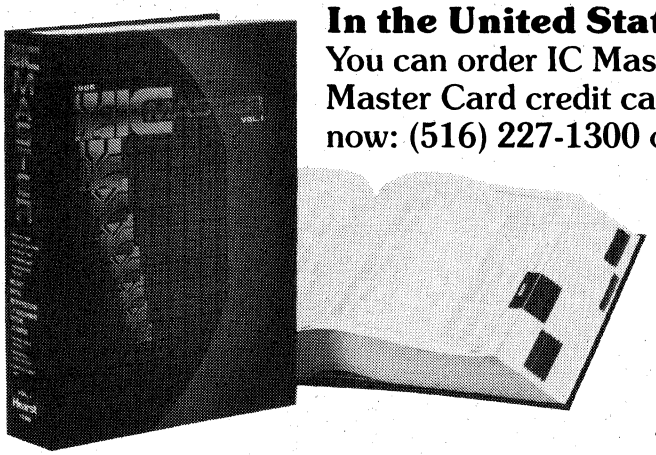
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

CAPACITANCE

Nominal capacitance expressed in picofarads (uF) by three-digit number, first two digits represent significant figures, last digit specifies number of zeroes to follow. When the nominal value is less than 10 pF, the letter 'R' indicates the decimal point and the succeeding digit(s) represent significant figure(s). For example: IRO indicates 1.0 pF; R75 indicates 0.75 pF and OR5 indicates 0.5 pF.

NEC SUPERCAP—DOUBLE LAYER CAPACITORS

NEC Double Layer Capacitors are ideal for IC memory backup. Unlike conventional battery backup, NEC DLCs have a virtually unlimited life. This makes the DLC particularly attractive in applications where replacement would be very inconvenient or difficult.

DLCs may be fully charged and completely discharged indefinitely. They are compact and totally maintenance free. Operating temperature is from −25 to +70°C.

Tests show the FZ0H473Z to be capable of maintaining a 1K CMOS RAM for up to 30 days @ 2 μA.

Typical operating voltage is 5 VDC with a maximum surge of 5.5 VDC. The FA1A series may be operated at 10 VDC.

There are three DLC series. The ultra-compact FS series is best suited for low current applications while the FA and FZ series are suited for higher loads.

These devices are **not** recommended for ripple absorption in DC power supply applications because they exhibit relatively high ESR. They may be arranged in series to achieve higher voltage and are essentially non-polar devices.

For complete specifications, ask for the NEC publication "Electric Double Layer Capacitor" by Sanada and Hosokawa.

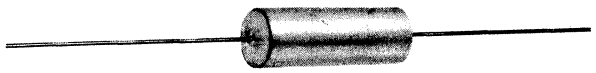
TYPE 107 POLYESTER FILM CAPACITORS

POLYESTER FILM CAPACITORS EXTENDED FOIL/FILM WRAP/EPOXY END FILL STYLE 107 −55°C TO +125°C



ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

CAPACITANCE MEASUREMENTS

Capacitors of 1.0 μF or less shall be measured at a frequency of 1000 Hz. Capacitors greater than 1.0 μF shall be measured at 60 Hz. The standard capacitance tolerance is 20%. Other tolerances are available upon request.

Reference: MIL-STD-202, Method 305.

TEMPERATURE CHARACTERISTICS

The maximum change in capacitance from the measured value at +25°C shall be −6% at −55°C, and +15% at +125°C.

DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.6% for values up to 1.0 μF and shall not exceed 1.0% for greater capacitance values.

INSULATION RESISTANCE

When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 50,000 megohm-microfarads, but need not exceed 100,000 megohms. The period of electrification shall not exceed two minutes.

Reference: MIL-STD-202, Method 302.

VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +85°C, or with linear derating to 50% of rated voltage above +85°C with a maximum temperature of +125°C.

VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case (less than .235 diameter)	200% of DC rating
Terminal to case (greater than .235 diameter)	400% of DC rating or 2,000 VDC, whichever is less

Reference: MIL-STD-202, Method 301.

LIFE TESTING

When tested for 1000 hours at 150% of the appropriate rated voltage for the test temperature, the capacitors shall exhibit no more than one failure in twelve pieces tested. Alternatively, an accelerated +125°C test may be performed at the +85°C voltage rating for a period of 250 hours. A failure is defined as:

a) A capacitance change of more than 10% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than ⅓ that specified in Paragraph 4; or
d) A permanent open or short.

VIBRATION

The capacitors will meet or exceed in the vibration requirements of MIL-STD-202, Method 201.

TYPE 185 METALLIZED POLYESTER CAPACITORS

POLYESTER TAPE WRAP CASE/EPOXY ENDFILL

Type 185 Capacitors feature extremely small size, light weight, and self clearing metallized construction which virtually eliminates catastrophic failures. Well suited for Voltage Multiplier Circuits in TV Power Supplies and Electrostatic copiers. Also ideal for Potting or Encapsulating in Electronic Sub-Assemblies, Power Supplies, etc.

CAPACITANCE
Measurements shall be made at 1000 Hz for capacitance values thru 1. MFD and at 60 Hz for values over 1. MFD.

CAPACITANCE TOLERANCE
Standard capacitance tolerance is ±20% (M). Closer tolerances available upon request.

DISSIPATION FACTOR
The dissipation factor shall not exceed 1% when measured at 25°C. Measurements shall be made at 1000 Hz for capacitance values thru 1. MFD and at 60 Hz for higher values.

TEST VOLTAGE
Capacitors shall withstand 200% of rated DC voltage for one minute at 25°C, with the charging and discharge current limited to a maximum of 1. Ampere.

OPERATING TEMPERATURES
−55°C to +125°C.

LIFE TEST
Capacitors shall withstand a life test of 250 hours at 125°C, with 140% of the 125°C rated DC voltage applied. A resistance of one ohm per volt of applied voltage shall be inserted in series with the capacitor.

VOLTAGE DERATING

METALLIZED POLYESTER CAPACITORS TYPE 189 FILM WRAP / EPOXY END FILL −55°C TO +125°C

Type 189 Capacitors features extremely small size, light weight and self clearing metallized construction which virtually eliminates catastrophic failures. Well suited for Voltage Multiplier Circuits in TV power supplies and Electrostatic copiers. Also ideal for Potting or encapsulating in Electronic Sub assemblies, Power supplies, etc.

CAPACITANCE
Measurements shall be made at 1000 cycles per second for capacitance values thru 1. MFD and at 60 cycles per second for values over 1. MFD.

CAPACITANCE TOLERANCE
Standard capacitance tolerance is ±20% (M). Closer tolerances available upon request.

DISSIPATION FACTOR
The dissipation factor shall not exceed 1% when measured at 25°C. Measurements shall be made at 1000 Hz for capacitance values thru 1. MF and at 60 Hz for higher values.

TEST VOLTAGE
Capacitors shall withstand 200% of rated DC voltage for one minute at 25°, with the charging and discharge current limited to a maximum of 1. Ampere.

OPERATING TEMPERATURES
−55°C to +125°C.

LIFE TEST
Capacitors shall withstand a life test of 250 hours at 125°C, with 140% of the 125°C rated DC voltage applied. A resistance of one ohm per volt of applied voltage shall be inserted in series with the capacitor.

VOLTAGE DERATING
These capacitors will operate as full DC voltage ratings at 85°C. For operation at temperatures above 85°C, see Figure 4.

VIBRATION
Capacitors shall withstand a vibration test per Method 204, Test condition B of MIL-STD-202B as modified by MIL-C-27287.

HUMIDITY TEST
These capacitors shall meet the humidity test requirements of MIL-STD-202 Method 103B, test condition B. After testing the I.R. will be equal to or greater than ⅓ of the initial requirement.

PEC 831 Metallized Polyester Film

General Characteristics

The PEC 831 is manufactured using a unique packaging process which allows the production of a compact body size for a given capacitance. This allows the designer to specify an automatically insertable, axial lead capacitor allowing higher circuit board densities than were previously possible. The general characteristics of the PEC 831 make it an ideal choice for general coupling, decoupling and filtering applications. All PPD capacitors are made in the U.S. and are available taped and reeled for automatic insertion.

PPC 830 Polypropylene Film/Foil

General Characteristics.

The PPC 830 is an axial lead, polypropylene film capacitor that features small size, low price and flame retardant coating. The electrical stability of polypropylene and its characteristic high resistance to moisture allow these units to retain their original capacitance over long periods of time without degradation due to changing environmental conditions. The PPC 830 has the excellent characteristics previously found only in polystyrene capacitors but offers a higher temperature rating and, of course, flame resistance. The low negative TC and very low dissipation factor of the PPC 830 provide for a stable frequency response curve and high Q in resonant and filtering circuit applications. Since the PPC 830 also exhibits high insulation resistance (I.R.) and low dielectric absorption (D.A.), it is a good choice for storage and timing circuit applications. All PPD capacitors are made in the U.S. and are available taped and reeled for automatic insertion.

PPC 831 Metallized Polypropylene Film

General Characteristics

The PPC 831 is an axial lead, metallized polypropylene film capacitor featuring small size, high performance, low price and conformal encapsulation with a flame retardant coating.

The physical and electrical characteristics of polypropylene as a dielectric are commendable. Polypropylene is relatively impervious to moisture. It is also extremely stable. The PPC 831 will, therefore, retain its original properties over extended periods of time in a fluctuating environment.

Other noteworthy attributes of the PPC 831 are high insulation resistance (IR) and a low dielectric absorption (DA) factor. Both of these parameters are of critical importance in the selection of a sample-and-hold capacitor in data acquisition applications. The DA of polypropylene is about 10 times less than that of polyester and is significantly less than that of polycarbonate or polystyrene.

Also to be considered are the gently sloping curves for temperature coefficient (TC), dissipation factor (DF) and capacitance variation with frequency. The relatively flat response of the PPC 831 assures dependable, stable performance when incorporated into critical resonant and filtering circuit applications.

The "A" and "B" case sizes of the PPC 831 and PEC 831 style capacitors are computer designed with today's manufacturing and design criteria firmly in mind — namely, automation.

Until now, the most useful configuration for automated assembly, with respect to general bypassing, filtering and timing requirements, has been the box style capacitor. This is because the corresponding axial style devices are of physical proportions incompatible with automatic insertion equipment. Unfortunately, the box capacitor presents the modern factory with its own unique problems. An expensive radial insertion machine must be obtained. Box insertion requires an additional step in the assembly process which adds both direct and indirect production costs. In comparison, axials insert 3 times faster than radials.

PPD has been studying this situation for some time now. The culmination of this work has been the development of the "A" and "B" case film capacitors. The designer is now presented with the capability of specifying axial lead, automatically insertable, metallized film capacitors in the range of .001 μF to .27 μF. Examination of the dimensions of the "A" and "B" cases will reveal that, in length, they closely approximate the dimensions of RN55 and RN60 style resistors. Both "A" and "B" cases have a .177" ± .020" diameter. They can, therefore, be taped on 0.2" centers. Ultimately, these devices can be sequenced on standard axial lead insertion machinery to provide high volume, low cost production.

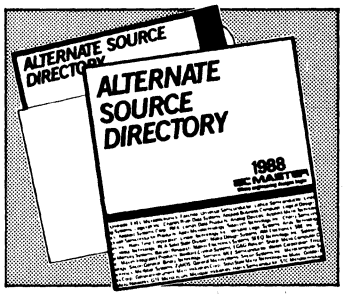
HEARST ENGINEERING SOFTWARE

ICMASD...IC Alternate Source Directory

If you've used the IC MASTER, you know what the Alternate Source Directory is. Engineers tell us that it's one of the most valuable sections of the Master. The Alternate Source Directory...ASD...is now available in floppy disk form.



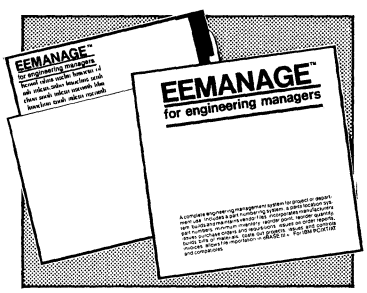
The electronic ASD is FAST! Just ask a question and the answer pops up in a split second.

The electronic ASD is FLEXIBLE! You can add ICs and you can add comments. You can add part numbers, prices, technical notes or anything else you like. You can customize the ASD to fit your needs and the needs of your company.

Order the 1988 Alternate Source Directory for your AT, XT or compatible. We'll send you two floppies and a very simple piece of printed documentation. Download the floppies and you're in business. All you need is a hard disk.

EEMANGE...for engineering managers

Developed by the publishers of EEM/ Electronic Engineers Master, EEMANAGE is a software program designed to make life easier for engineers and engineering managers.



EEMANAGE does many things: 1. Develops Bills of Materials 2. Assigns Part Numbers logically 3. Manages Engineering Inventories 4. Issues Purchase Requisitions 5. Relieves Engineering Inventories 6. Manages a Parts Storage System 7. Issues Engineering Change Notices 8. Interfaces with dBaseIII+ Programs.

EEMANAGE is completely menu driven. It is simple to understand and operate. Any competent secretary can be up and running on EEMANAGE in minutes.

Order EEMANAGE for your AT, XT or compatible. We'll send you one floppy and brief, very user friendly documentation.

The basic price for ICMASD or EEMANAGE is $149.50 each and includes floppy disk(s) and complete program documentation.

For immediate shipment you can order ICMASD or EEMANAGE on your VISA or MasterCard credit card simply by calling Marie Botta at (516) 227-1300.

MULTIPLE SECTION CAPACITORS

These microminiature multiple section capacitors are uncased rectangular plate style parts rated for operation from 1KV to 6KV. The capacitors are formed using two to six sets of electrodes on a rectangular ceramic dielectric chip. Typical capacitance values range from 20pF to 70pF per section and MS capacitors can be designed to specific customer requirements.

MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The measure of the opposition of a capacitor to accepting a charge and expressed in ohms. When direct current is applied under stated conditions capacitive reactance becomes a constant but, when alternating current is applied the capacitive reactance varies until an equilibrium is achieved and the capacitor appears to have only direct current present. This condition is commonly used in filter applications or in coupling circuits.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The measure of quality of the insulating materials in a capacitor. Dry air has a dielectric constant of one (1). Aluminum oxide used in aluminum electrolytic capacitors has a nominal dielectric constant of ten (10).

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors.

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

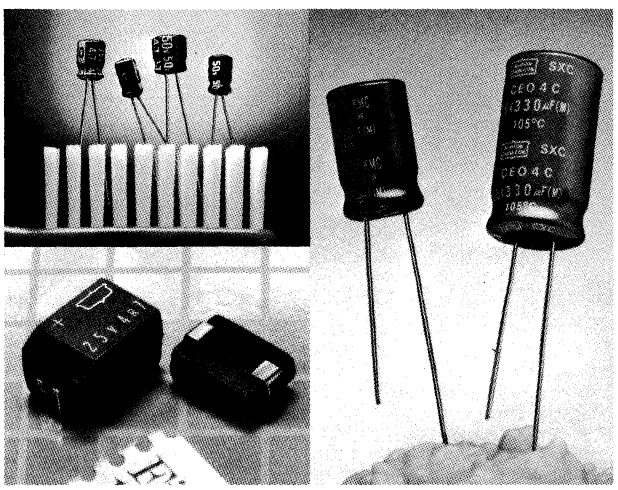
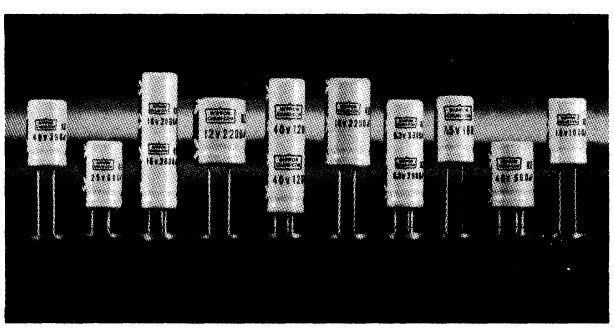
UNITED CHEMI-CON

The LEADER in Aluminum Electrolytic Capacitors for over 50 Years. Today, More Popular Than Ever!

Wider Product Range

The latest technology enables United Chemi-Con to offer a wider choice of capacitors than ever before. High gain foil increases our capacitors' volumetric efficiency. We can build smaller and smaller capacitors without diminishing performance. We also are designing more capacitors that meet special needs, such as low leakage current, without sacrificing other electrical characteristics. And our expanding series of solvent-proof capacitors can be inserted on PC boards along with other components before soldering and cleaning with halogenated solvents. Whatever your needs, we have the capacitors to meet them.





Expanded Facilities

In 1983 United Chemi-Con opened a new 54,000 square foot warehouse in Compton, California. The most advanced computer systems link this warehouse with our Corporate Headquarters in Rosemont, Illinois. In 1984 we opened a Western Region Branch Sales Office in Compton. It provides full-scale services to our Western customers.

Engineering & Technical Support

A team of applications engineers at Corporate Headquarters answers engineering questions, cross-references parts and reviews drawings. They are readily accessible to our customers by telephone. Our product data sheets, newsletters and catalogs set the standard for the industry. Send for our Full Line Catalog detailing the widest variety of aluminum electrolytic capacitors available from any one manufacturer in the world.

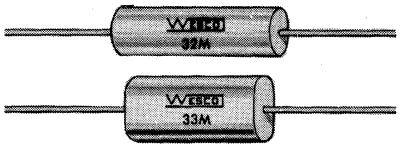
WESCO® POLYESTER FILM-FOIL CAPACITORS



SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 100,000 megohms-microfarads, but need not exceed 100,000 megohms.

DISSIPATION FACTOR

Shall not exceed 0.75% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.50% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 80°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287,, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES

Wrap and fill construction.

Tubular or oval configuration for optimum space savings.

Extended foil design.

Quality control procedures per Mil-Q-9858.

Will meet or exceed Mil-C-27287.

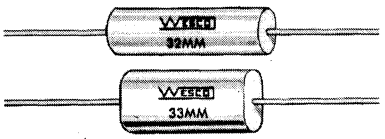
WESCO® METALIZED POLYESTER CAPACITORS



SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 30,000 megohms-microfarads, but need not exceed 30,000 megohms.

DISSIPATION FACTOR

Shall not exceed 1.0% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.3% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES

Wrap and fill construction
Tubular and oval configuration for optimum space savings

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 500,000 megohms-microfarads, but need not exceed 500,000 megohms.

DISSIPATION FACTOR
Shall not exceed .05% when measured at 25°C and 1000 Hz, ± Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT
Capacitance shall change linearly over operating temperature range at rate of −105, ±30 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)
Less than .05% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE
−55°C to +85°C with full rated voltage applied.

WESCO® POLYPROPYLENE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE
200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

INSULATION RESISTANCE
At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 250,000 megohms-microfarads, but need not exceed 250,000 megohms.

DISSIPATION FACTOR
Shall not exceed .05% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE
Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST
Shall withstand 140% of rated voltage at 105°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT
Capacitance shall change linearly over operating temperature range of −55°C to +85°C at rate of −290, ±75 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)
Less than .2% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 105°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE
Meets requirements of Mil-C-27287, Para 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST
Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE
−55°C to +105°C with full rated voltage applied.

Reduction of inductance due to DC current can be taken from tables. To find additional inductance change for operating levels and frequency other than listed in tables, solve for X using formula given above.

Use V_{OP} = Actual operating level (RMS)
V_{TEST} = RMS test level indicated at 10KHz
f_{OP} = Actual operating frequency
Refer to corresponding graph to determine inductance change in %.

SUB-MINIATURE RF CHOKES

An extremely versatile series of iron core R.F. chokes designed to meet the industries' demand for high reliability, ultra-miniature components. The coils are ideally suited to network and filter design, delay lines and computer applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per JAN-T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class B of MIL-C-15305. Note: L measured on 260A Q Meter except 120 thru 500 mH which are measured on 1 kHz Bridge.

SHIELDED SUBMINIATURE ADJUSTABLE RF COILS

Dimensions: 1/2" sq., x 5/8" high.
These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

ADJUSTABLE R.F. COILS 9100 SERIES SHIELDED

These ultra compact adjustable coils offer a good inductance range with relatively small changes in Q. Tuning is accessible from either top or bottom of the assembly. Magnetic shielding is achieved by the use of cup cores while the copper shield offers effective electro static shielding. Printed circuit terminals on base and shield.

Applications between 10 kHz and 200 MHz
Dimensions: .440" Sq. x .550" High.

NOTES:

1. Effective inductance and Q measured on Boonton 260A Q-meter at frequencies specified, in accordance with MIL-C-15305.
2. Current rating (Rated IDC) is based on .75 watt power dissipation for approx. 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from its initial (zero — DC) value.
4. Dielectric Withstanding Voltage — 1000 VRMS.
5. Operating Temperature Range — −55°C to +85°C.
6. Materials:
   Coil Form — Ferrite.
   Magnet Wire — Type B per MIL-W-583.

HIGH CURRENT CHOKES

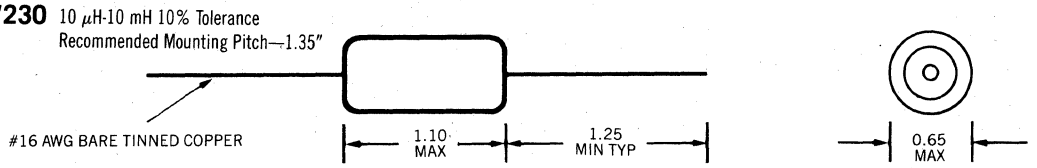
7230

TYPE 7230 10 μH-10 mH 10% Tolerance
Recommended Mounting Pitch—1.35"



NOTES:

1. Inductance measured on Cambridge Technology type 520 L/C Meter at 1 KHz.
2. The current rating (Rated IDC) is based on 0.75 watt power dissipation (I^2R) for an approximate 20°C temperature rise. Depending on the application, these units may be operated at higher currents.
   The core material for the 7230 series has been chosen for optimum current handling capability. Because this material has a relatively low volume resistivity, the core will appear as a shunt resistance on the order of 1 Kilohm, which may have to be taken into account when determining total power dissipation; e.g., if the induced voltage across the coil is 10 volts, there will be a V^2/R loss on the order of 0.10 watt, in addition to the I^2R losses associated with the winding.
3. The incremental current (INCR I) is the approximate current at which the inductance will be decreased by 5% from its initial (zero-DC) value because of saturation. If the current is increased beyond INCR I, the inductance will continue to decrease as shown by the saturation curve below.
4. Dielectric Withstanding Voltage: 1000 VRMS.
5. Operating Temperature Range: −55° to +105°C.
6. Marking: Printed with Caddell-Burns Part Number.
7. Materials:

   Coil Form: Ferrite
   Magnet Wire: Per FED SPEC J-W-001177/9
   Jacket: Flame Retardant PVC shrink tube UL Type FR-1 per MIL-I-23053

NOTES:

1. Inductance measured on Cambridge Technology type 520 L/C Meter at 1 KHz.
2. The current rating (Rated IDC) is based on 0.5 watt power dissipation (I^2R) for an approximate 20°C temperature rise. Depending on the application, these units may be operated at higher currents.

   The core material for the 7200 series has been chosen for optimum current handling capability. Because this material has a relatively low volume resistivity, the core will appear as a shunt resistance on the order of 1 Kilohm, which may have to be taken into account when determining total power dissipation; e.g., if the induced voltage across the coil is 10 volts, there will be a V^2/R loss on the order of 0.10 watt, in addition to the I^2R losses associated with the winding.
3. The incremental current (INCR I) is the approximate current at which the inductance will be decreased by 5% from its initial (zero-DC) value because of saturation. If the current is increased beyond INCR I, the inductance will continue to decrease as shown by the saturation curve below.
4. Dielectric Withstanding Voltage: 1000 VRMS.
5. Operating Temperature Range: −55° to +105°C.
6. Marking: Printed with Caddell-Burns Part Number.
7. Materials:

   Coil Form: Ferrite
   Magnet Wire: Per FED SPEC J-W-001177/9
   Jacket: Flame Retardant PVC shrink tube UL Type FR-1 per MIL-I-23053

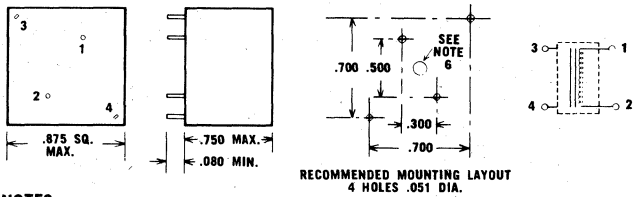
SHIELDED HIGH CURRENT CHOKES



TYPE 6900 10 μH — 82μH — 10% Tolerance
100 μH — 1.0 H — 5% Tolerance

6900

SPECIAL FEATURES

SHIELDED — Magnetically shielded with ground lugs to minimize external field.

ENCAPSULATED — with epoxy for maximum ruggedness and moisture protection.

VARIABLE — with optional trimmer. See note 6.

STABLE — typical temperature coefficient of +76 ±28 ppm/°C from −30° to +70°C.

NOTES:

1. Inductance measured on General Radio 1650 B Impedance Bridge at 1 KHz.
2. Current rating (Rated IDC) is based on 1.0 watt power dissipation for approximately 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current.
3. Incremental current (INCR I) is the minimum current at which the inductance will be decreased by 5% from the initial (zero-DC) value.
4. Dielectric Withstanding Voltage — 1000 VRMS.
5. Operating temperature range −55° to +105°C.
6. These units are available with an optional trimmer which, when fully inserted, will increase the inductance by at least 20%. Order by adding suffix "V" to dash numbers, e.g.: 6900 -25V is continuously variable from 1.0 mH ±5% to 1.2 mH +10% −5%. If bottom access to trimmer is desired, provide a 3/16" dia. center hole as shown in the recommended mounting layout.
7. Materials:
   Core — Ferrite.
   Case — Epoxy encapsulated.
   Magnet Wire — per FED SPEC J-W-001177/9 (MIL-W-583 Type B)

"SLOT 10" 10mm TUNEABLE RF COILS

These veratile Coilcraft variable inductors operate over a wide range of frequencies. Standard inductance values are available from less than 1 μH to over 1 mH. Custom values can also be provided upon request.

Coilcraft "Slot Ten" RF coils come in an international 10mm package. Their precision-molded slotted bobbins assure tight tolerances and high stability.

A variety of magnetic and electrostatic shielding options are offered. "Slot Ten" coils are tuned by means of ferrite or powdered iron tuning cores with a hex hole for easy, positive adjustment.

Coilcraft **Designer's Kit M100** contains 18 shielded and 18 unshielded coils (3 each) plus extra cores and sleeves to create all of the standard values shown. To order, please contact Coilcraft.

SELECTION GUIDE

Coilcraft "Slot Ten" coils come in five different styles. Consult this table for the inductance range, relative Q, and shielding options of each style. Then use the appropriate specification chart to pick a specific part number.

Style	L (μH)	Electrostatic Shield	Magnetic Shield	Recommended Frequency	Tuning Core	Relative Q	Relative Cost
Style 1	.8 — 624	No	No	Higher	Iron	Hi	Low
Style 2	.8 — 927	No	No	Higher	Ferrite	Hi	Low
Style 3	.7 — 450	Yes	No	Higher	Iron	Low	Med
Style 4	.8 — 624	Yes	Yes (Iron)	Lower	Iron	Med	Hi
Style 5	.9 — 1143	Yes	Yes (Ferrite)	Lower	Ferrite	Med	Hi

1 All readings taken on H.P. 4342-A Q Meter.
2 L min is achieved at maximum extension of the core toward PC board. Complete tuning range is reached within the boundaries of the coil form.
3 All specifications are recommended at standard "Q" meter frequency as a simple way to assure the quality of our parts. L and Q readings will vary with frequency change.
4 Unshielded parts are coated with lacquer to protect the winding.
5 Shielded parts have a sleeve insert to protect the winding.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

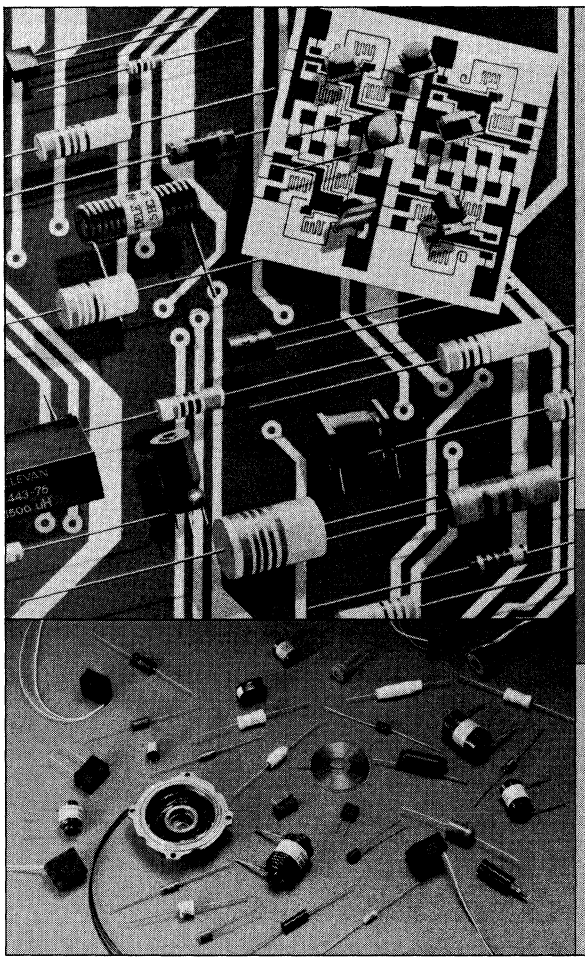
AMERICAN PRECISION INDUSTRIES ELECTRONIC COMPONENTS

For over three decades, we have set the standards for inductor design and manufacture. Our experience in supplying high reliability components to the military and the industrial/ commercial markets is reflected in the same standards of quality for the products of all our Electronic Components Group Divisions.



Delevan Division Coils & Inductive Components

A wide variety of standard products are available for both traditional thru-the-hole mounting as well as to meet the needs of today's newer surface mountable technology.

Molded RF unshielded coils are available in a range from 0.022μH through 150,000μH. Coils which are electromagnetically shielded to reduce magnetic coupling between components are available in a range from 0.1μH to 10,000μH. Newly qualified MIL-SPEC coils 39010/-8, 9, 10. 0.10μH-1000μH. Special values, sizes, and tighter tolerances are available on a custom design basis. Coils can also be supplied unmolded or with reel tape packaging.

Surface Mountable Components

Unshielded surface mountable inductors are available from 0.10μH to 1000μH. Shielded parts are available from 0.10μH to 560μH. Parts are available with laser marking when required.

DELEVAN SURFACE MOUNTABLE INDUCTORS

Expertise gained in over two decades of surface mounted inductor development and production has enabled us to produce a new generation of coil packaging to meet the critical demands of present day assembly methods and for designs where space and weight are critical...at a price comparable with conventional wire leaded components.

They are compatible with all state-of-the art attachments and soldering methods. Standard metalized ends are copper coated with 60/40 solder.

They are molded in thermally stable flame retardant epoxy resin. High temperature solder is used for internal joints to insure maximum stability during assembly and attachment operations.

Their square outline package with symmetrical orientation is ideal for automatic indexing and assembly methods. Their parallel flat surfaces are well adapted to all methods of vacuum or key jaw pickup and indexing. They are also available with 4 opposing contacts if required. Standard identification by laser marking of inductance and tolerance.

INDUCTORS

SUPER WEE-WEE-DUCTOR

An Ultra-Reliable molded shielded inductor. Subminiature size for high density circuits. Great Inductance-to-size ratio. .10 uH to 10,000 uH. 0.136" diameter x 0.335" length. 61 stock values.

The **SUPER WEE-WEE-DUCTOR,** a shielded miniaturized inductor, provides a greater inductance-to-size ratio in a molded epoxy envelope. Use of unique "T" lead construction on all values from 15 uH to 10,000 uH assures exceptional reliability in ranges where fine wire sizes are used. This MS inductor series is designed to meet the stringent requirements of MIL-C-15305 (latest revision). This provides the design engineer with utmost reliability, electrical performance, and minimum coupling in high density packaging.

HIGH CURRENT CHOKES PL SERIES

Inductance: Measured on general radio 1657 LRC bridge at 1 kHz.

Current (rated IDC): Based on 0.5 watt power dissipation for approximately 20°C temperature rise. Depending on the application, these units may be operated at up to twice the rated current..

Incremental Current (INCR I): The minimum current at which the inductance will be decreased by 5% from its initial (zero DC) value.

Dielectric Withstanding Voltage: 1000 VRMS

Operating Temperature Range: −55°C to 105°C

Materials: Coil form — ferrite
Cover — flame retardant heat-shrink tubing
Magnet wire — per MIL-W-583 Type B

Marking: Printed with part number.

These Inductors are well suited for use in Switching Regulators, DC to DC Power Supplies and all types of Electrical Equipment where the elimination of line transmitted Electromagnetic Interference is important. Electrical equipment will generate noise due to switching operations of transistors, SCR's, relays, triacs, etc. By using these Inductors, noise being fed back to the power line is minimized to an acceptable level and this noise will not interfere with other equipment operating on the same power line.

ALL INDUCTORS ARE MEASURED AT 0 DC. THE MAXIMUM DC LISTINGS ARE FOR APPROXIMATELY 30°C HEAT RISE AND APPROXIMATELY 2% DROP IN INDUCTANCE. THE CHANGE OF INDUCTANCE WITH AC OR DC CURRENTS IS ILLUSTRATED BY THE CURVES. THE EXCITATION IS PLOTTED IN mA ×√mHy. FOR EXAMPLE THE 0.495 mH INDUCTOR (62272) WITH 170 mA DC FLOWING WILL HAVE AN EXCITATION OF mA ×√mHy = 120, AND THE INDUCTANCE WILL DROP FROM 495 uH to 485 uH. IF THE 170 mA WAS AC, THE INDUCTANCE WOULD BE 510 uH.

SURFACE MOUNTED DEVICE (SMD) SPIRAL CHIP INDUCTOR

A complete family of SMD spiral chip inductors are available from two turns to fourteen turns. The product has excellent uniformity and is easily installed with standard chip handling techniques. Reflow solderable types are totally compatible with surface mount assembly techniques and because of the wide selection of values, can be selected to meet critical close tolerance requirements. It should be noted that because of stray effects differences in interconnection geometry and sensitivity to measurement techniques, the electrical values shown here may not represent values in a specific application.

The chip and wire bondable types can be used as tunable devices by selecting different points at which the leads are bonded to the inductor. Additional bonding pads are optionally available. Custom geometry spiral inductors can be tooled for a nominal charge.

PICONICS

Micro Inductor Products and Application

The principal application for Piconics' Inductors has traditionally been in linear hybrid amplifier, micro-strip and stripline circuits. These designs have been used in a wide range of systems from the Space Shuttle Program to commercial microwave applications. Major use is in military systems where excellence and tight quality controls are required.

Piconics' components feature excellent stability, high Q and controlled characteristics. They are packaged in various configurations with a wide range of lead materials. Internal connections are welded to avoid the problems associated with high temperature soldering. Encapsulation is mechanically interlocked to strengthen all surface (shear) bonds. The materials and methods used at Piconics are compatible with normal requirements in hybrid circuit manufacturing.

Piconics' custom design capability has led to the development of unique products. Should your inductor requirements be outside the parameters of our standard listings, contact Piconics directly for a prompt quotation to your needs.

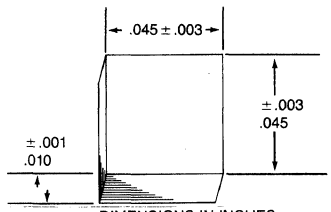
PICONICS

SP SERIES/M/MG SERIES MC SERIES

SP Series Spiral Chip Inductor

This style inductor may be used where low inductance values are required and gold wire bonding is the method for making interconnections. When used as an r.f. choke, attach center pad to r.f. and outside pad to power supply. Custom designs available. Other ceramic materials having various dielectric constants are available.



DIMENSIONS IN INCHES

NOTES:

(1) Self-resonant frequency may be increased by mounting inductor on an insulating standoff. These Stand-offs can be provided by Piconics.
(2) Inductors to 25 turns in this geometry are available on special order.
(3) Attachment is generally made using non-conductive epoxy such as EPO-TEK H-61 or EPO-TEK H-20.
(4) Thermosonic wire bonding using 1 mil gold wire is recommended for lead attachment to this style inductor. Gold ribbon may also be used.
(5) Resonances shown in the tables are the lowest self resonances encountered. Typical values are higher.
(6) Measurements are very dependent on fixturing and frequency.
(7) Quartz typically gives higher SRF and Q's than ceramic due to lower Dielectric Constant.
(8) Bonding area typically .005" in diameter.
(9) Other thicknesses available upon request.

CUSTOM DESIGNS

But even with our broad line of standard products, there will always be "specials". We've been in this business exclusively for over 30 years, so we can say with confidence, "If you can describe it, we can make it". And we send out samples in one day in most cases, or perhaps as long as ten days, if you've got a far-out design. There's no charge, by the way, for samples; we believe we'll earn your business as we learn about your needs. If our samples meet your requirements, you'll find our custom products are available at standard prices.

TECHNICAL SUPPORT

You can count on our technical backup if you encounter circuit or systems problems involving coils or transformers. We'll return phone calls promptly, and even fly an application specialist to your plant if necessary . . . and that's a fact.

COMPETITIVE

Our prices are competitive and our product quality and reliability are excellent due to our years of design/production experience coupled with the latest automated assembly equipment, robotic workstations, and specialized ATE test setups. And we won't keep you waiting . . . we meet our scheduled delivery dates.

So think Renco when you think coils and tranformers. We'll make sure you made the right decisions.

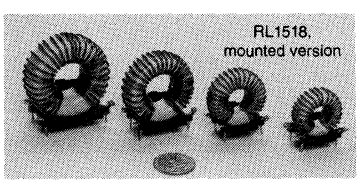
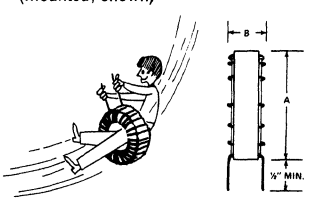
Swingductor™ RL1386 /RL1518

(unmounted) (mounted, shown)

185 values each version





Designed for applications requiring a known inductance change with changing current loads (as in power supplies). Although similar in appearance to conventional toroids, the special core material allows a "controlled saturation," so that a specific inductance value is repeatable at a specific current. The core material is effective up to 1 MHz. As a result of toroidal design, the Swingductor™ produces a closed magnetic field, resulting in low EMI. All are supplied with pretinned leads for easy PC board installation.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

INDUCTORS FOR SWITCH-MODE POWER REGULATOR, CONTROL AND NOISE FILTERING CIRCUITS

The **SKC SERIES INDUCTORS** are designed on gapped toroidal tape wound cores for DC switching power supply, regulator and energy storage circuits — DC current ratings **5 to 50 AMPS DC.**

The **SKL SERIES INDUCTORS** are designed on functional gapped toroidal tape wound cores for power circuits requiring high inductance at low DC currents and nominal inductance at rated DC amps.

The **SKP SERIES INDUCTORS** are designed on powered iron toroidal cores for RFI and EMI filtering and other noise absorbing applications. Also, **SKP SERIES INDUCTORS** are most useful in DC circuit applications, available in a wide range of "L" values and DC current ratings to **40 AMPS DC.**

MULTILAYER CHIP INDUCTORS (MLF SERIES)

TDK Multilayer Chip Inductors use magnetic materials and multilayer technology in producing epoch-making inductors which do not use any windings. TDK multilayer chip inductors use ferrite paste and electric conductor paste alternately layered in a completely monolithic structure. Inductor is obtained using a sintered closed magnetic circuit such as toroidal and a magnetic shield.

- No crosstalk between inductors due to magnetic shield. Perfect for high density installation.
- Unified automatic chip mounting shape with no directionality.

DC FILTER CHOKES OF TOROIDAL DESIGN

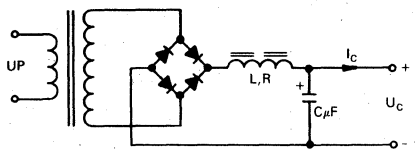
CUSTOM MADE FOR 50 OR 60 HZ RECTIFIERS

TOROID CORPORATION OF MARYLAND has developed a new concept for low frequency chokes based on its in-depth knowledge of toroidal design.

Our chokes are smaller in size, have less weight, run quieter, and have smaller losses than ordinary chokes. The low strayfield also permits mounting of our chokes flush to the chassis.

In many rectifier applications, our chokes are used as a better alternative to capacitor filtering. One typical application is ordinary rectifier circuits with high voltage requirements for which capacitors are both bulky and expensive. Another application is reversible DC motor controls where a filter choke reduces the motor losses and improves the motor torque.

Rectifier with choke filtering.



A rectifier with choke filtering needs only a small capacitor, or no capacitor at all. An added advantage of choke filtering is that the VA rating of the rectifier transformer is reduced from about 1.5 times the DC power (for capacitor filtered rectifiers) to about 1.1 times the DC power (for choke filtered rectifiers). This reduction in transformer size and cost can be subtracted from the size and cost added by the filter choke.

Our low frequency chokes are also used in AC circuits as balancing transformers for current splitting and current combining, and as ballast reactors.

The table and instructions below make it easy to select the right DC filter choke directly from the desired DC voltage and DC current.

Worksheet

To select the proper choke size:

1. Take the desired DC voltage at no load, and add 2V.
2. Multiply the resulting DC voltage by your rated DC current to get the DC Power (Pdc).
3. Go to column 5 for 50 Hz rectifiers or to column 6 for 60 Hz rectifiers (Pdc max). Find a choke size that has the same or larger DC Power than calculated above in step 2.
4. Go to column 4 (Idc max). Check that the current listed here is equal to or larger than your rated current. If not, select a choke size that will support your rated DC current.

Vdc (no load) + 2 = _____ V

Pdc = _____ W

Pdc max = _____ W Core No. _____

Idc max = _____ A Idc rated = _____ A

*If Idc rated > Idc max, then choose new core:

Core No. _____

After you have selected a size for your choke:

5. Calculate the DC voltage drop over the choke by dividing Pcu in the last column (for the size you have selected) by your rated current. (The DC resistance in the choke is Pcu divided by the square of the rated current.)
6. You can calculate the inductance of the choke as follows:
   Divide Ws from column 7 (for the choke size you have selected) by the square of your rated current. Multiply the result by 2, and you have the inductance in Henry.

Vdc choke = _____ V

R choke (dc) = _____ Ω

L choke = _____ H

NOTE: If Pdc max. from column 5 or 6 for the selected choke is much larger than the DC Power (Pdc) from step 2, both the DC voltage drop (step 5) and the inductance (step 6) can be reduced by using fewer turns of heavier wire. The max. reduction is proportional to the square of (Pdc/Pdc max.)

Designed to meet the requirements of MIL-C-15305, Grade 1, Class B (−55°C to +125°C). The rated temperature rise is 35°C above an ambient of 90°C. Overload current should not exceed 1.4 times the rated current. Dielectric withstanding voltage is 700 volts rms. The powdered iron cores used in these items possess excellent temperature stability and result in an inductor with low external magnetic field. This allows mounting in close proximity to each other and to other circuit components without ill effects.

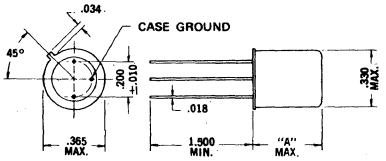
TG, TH SERIES



Series	A max.	Weight
TG	.390	.06 oz.
TH	.350	.07 oz.

The TG and TH series offer high "Q" inductors in a TO-5 transistor can configuration. High density packaging can be accomplished with little regard to coupling between adjacent circuitry since construction of these units results in a low external magnetic and electrostatic field.

TG SERIES

Recommended Frequency Range: 10 KHz to 500 KHz.
Inductance Tolerance: ±5%.
Inductance Stability: Less than ±2% from −20°C to +130°C.
Method of Test: Inductance is measured on a General Radio inductance bridge, Type 1632A with leads connected directly to bridge. "Q" is measured on HP4342A "Q" meter with leads connected directly to the "Q" meter terminals.
MIL-T-27, Grade 4, Class S.
Temperature Range: −55°C to +130°C.
Insulation Resistance: 10,000 Megohms minimum at 100 volts DC.
Dielectric Withstanding Voltage: 100 volts rms.

PQ CORES

TDK PQ cores are ferrite cores for switching power supplies which have the most appropriate shape for performing analysis of transformer iron and copper loss when used as a power supply transformer and driven at a high frequency. They are also appropriate for performing temperature rise and inductance analysis.

Features
- Cores for uses ranging from 50W to 1kW (100kHz); and employ the most appropriate shapes.
- Installation volume and on-board installation area are reduced.
- Pin equipped bobbins are employed to permit easy terminal handling.
- Permit various safety standards to be easily maintained.

Applications
Inverter transformers and choke coils for switching power supplies.

EPC CORES

EPC cores are designed for thin (approximately 1 inch) power supply and have an installation height of 12 to 16mm, an elliptic center leg for easy winding, and 10 to 12 terminals for easy designing.
High-performance power ferrite H7C4 employed in these cores enables a user to design a power supply for high frequency with less heat generation.

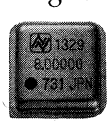
NDK: When timing is critical rely on the leader.

Clock frequencies from 28 kHz to 70 MHz. Only from NDK

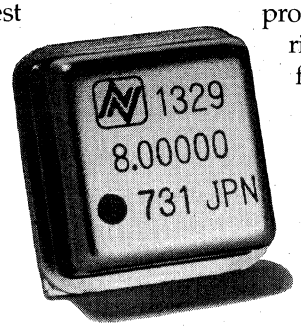
Tiny tornado. NDK's 1300 Series Compact Crystal Clock Oscillators pack up to 70 MHz in a package 0.52" on a side. That means you can pack higher frequency oscillators on a smaller board. They're perfect for high speed applications such as modems, computers and CAD/CAM workstations. And the 1300 Series offers the widest range of TTL and CMOS-compatible oscillators you'll find. Enable/disable is standard. Dual frequency output is an option.



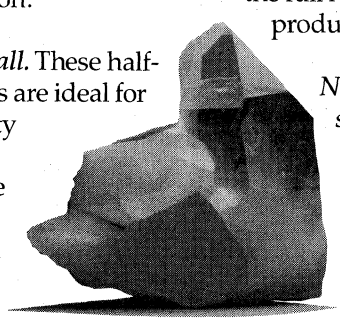
Actual Size: 0.52" square. Less real estate. Full frequency range.

Think Small. These half-size clock oscillators are ideal for rugged, high density board applications. Particularly portable instruments, PCs and "harsh environment" applications.

Absolute quality control. Because we're the world's largest manufacturer of synthetic quartz crystals, we can establish and maintain absolute quality control. NDK unconditionally guarantees all of our crystal products to be free of impurities and defects. Thus, you can expect not only longer product life, but absolutely accurate frequencies over the full NDK product spectrum.



NDK 1300 Series: Broadest range of frequencies — 28 kHz to 70 MHz. Low power/low heat CMOS. Choice of TTL, CMOS or dual-compatibility. Rise and fall times (5, 7, 10 ns). Fan out (2 or 5 TTL gates). Sealed, grounded metal case is ideal for harsh environments.



NDK controls every step from growing our own crystals, to manufacture and testing. That's why you can rely on NDK.

NDK: Your single source. NDK offers the widest range of compact crystal clock oscillators, microprocessor quartz crystals, standard crystal clock oscillators and crystal filters available. And most products are available right off the shelf from NDK's nationwide network of stocking distributors.

Free catalog. Free samples. Contact us for our free catalog. And if you're designing or prototyping a system, ask for free evaluation samples. We'll get back with samples. Fast. Because at NDK, timing is everything.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

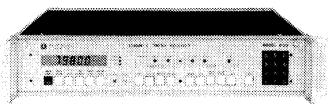
TIMING & FREQUENCY INSTRUMENTS

Austron manufactures a full line of instruments for precise management of time and frequency.

2100/2100F LORAN-C RECEIVER/MONITOR

Austron receivers are microprocessor-based, automatic acquisition and tracking receivers that utilize the LORAN-C groundwave to provide a traceable reference for time epoch determination, frequency management, calibration and control. These receivers provide time accuracy to one microsecond and frequency accuracy to parts in 10^{12}.



AUSTRON 2100

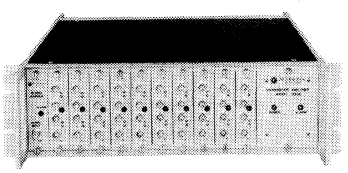
2110 DISCIPLINED FREQUENCY STANDARD

A state-of-the-art, microprocessor controlled system that automatically locks the frequency of its precision ovenized crystal oscillator to that of an externally applied reference having superior long-term stability. Uses a third-order servo technique to correct the frequency offset and aging of the internal oscillator. If the external reference is removed or fails, the 2110 will continue to apply corrections and will typically limit the frequency offset to parts in 10^{12} for several days following the reference loss.

AUSTRON 2110

1295D DISTRIBUTION AMPLIFIER

Provides the necessary noise immunity and drive capability to interface a local frequency standard to other equipment at distances up to 1000 feet. Four standard frequencies can be accommodated (10, 5, 1 and 0.1 MHz). For other frequencies consult factory. Input frequencies and number of outputs for each frequency are customer specified to provide a more cost effective system. Single frequency units can have up to 40 individual outputs, while units with 2 to 4 frequency inputs will have four or more outputs for each input.



AUSTRON 1295D

1210D SERIES PORTABLE CLOCKS

Compact, self-contained, self-powered time references providing stable time outputs at several pulse and sinusoidal frequencies with a digital time-of-day display.

AUSTRON 1210D

TIME CODE INSTRUMENTATION

EFRATOM is the recognized world leader in precision time and frequency systems for military/aerospace and commercial applications. Utilizing state-of-the-art atomic oscillator technology, EFRATOM has conceived and developed a family of time and frequency references that find valuable application in radio navigation, geophysical survey positioning systems, satellite tracking and control, communication systems employing PCM and spread spectrum techniques and standard time and interval generation and transfer.

EFRATOM's Model M-3100 is the world's smallest military atomic oscillator measuring just 3.25 in x 3.25 in x 4.5 in (83 mm x 83 mm x 114 mm), yet this instrument has excellent long term stability and fast warm-up performance. Developed specifically for military use, the Model M-100 and M-3100 rubidium oscillators are radiation hardened and offer unparalled performance in the toughest of airborne and ground environments.

EFRATOM also offers a modular line of frequency components, Model MFS in a 19 inch rack, permitting the user to configure unique time and frequency systems including GPS and Omega calibration.

Complimentary to its range of precision oscillators, EFRATOM offers the Model MRT ultra-stable atomic frequency standard for laboratory and field calibration. More recently, EFRATOM introduced its Atomic Oscillator Test Set, Model TS-105A, for frequency stability (Allan Variance) measurements.

BALL's scientists, in conjunction with NBS, have developed a Compact Passive Hydrogen Maser for commercial production (not pictured above, but specified below).

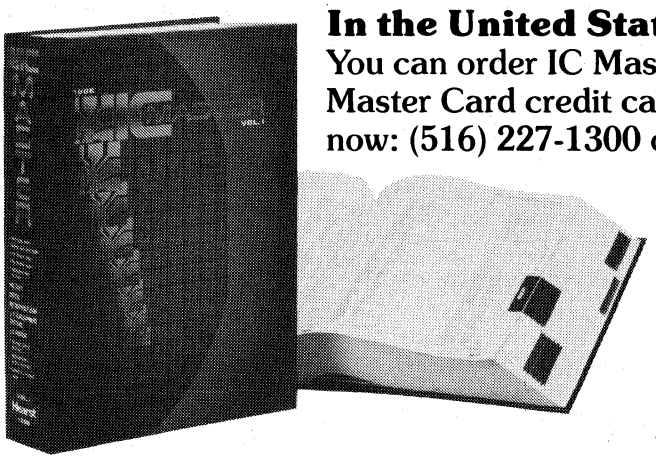
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

PRECISION SC CUT CRYSTALS

In 1974 it was announced that a theoretically predicted double-rotated crystal cut which would result in no frequency excusion or transients do to thermal shock had been derived. In 1975 the stress compensated, SC cut, was predicted which would result in a zero first-order temperature coefficient and eliminate frequency changes due to mechanical stress within or induced on the quartz crystal blank. During 1976 an experimental configuration of this previous work was reported on which had determined an orientation for the crystal axis for optimum stress compensation. Colorado Crystal Corp. has carried this work by many individuals in our field to the point of production. Colorado Crystal Corp. presently designs and manufacturers SC cut crystals utilizing specially designed equipment to insure the maximum performance from each and every SC cut crystal supplied to our customers.

Precision SC cut crystals can be designed and manufactured to cover the full frequency and overtone spectrum. Specifications for commonly used designs are listed below. Crystals can be ordered to these specifications by using the CCC P/N or the specifications can be varied within certain limits to meet your requirements.

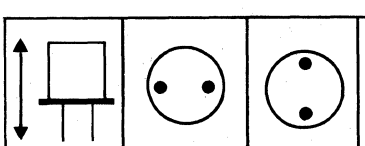
2G, VIBRATION SENSITIVITY

The G sensitivity of a quartz crystal is normally specified 2 ways, either as a per axis frequency shift or a vector sum of all 3 axis. Colorado Crystal Corp. can test and supply SC cut crystals to either or both of these requirements. The G sensitivity can be effected by many factors such as freqency, overtone, holder and crystal design. At right is typical data, per G and Vector, for a shipping lot of specially designed 10 MHz, 3rd overtone, SC cut crystals.



Per Axis, Per G			Vector Sum	Units

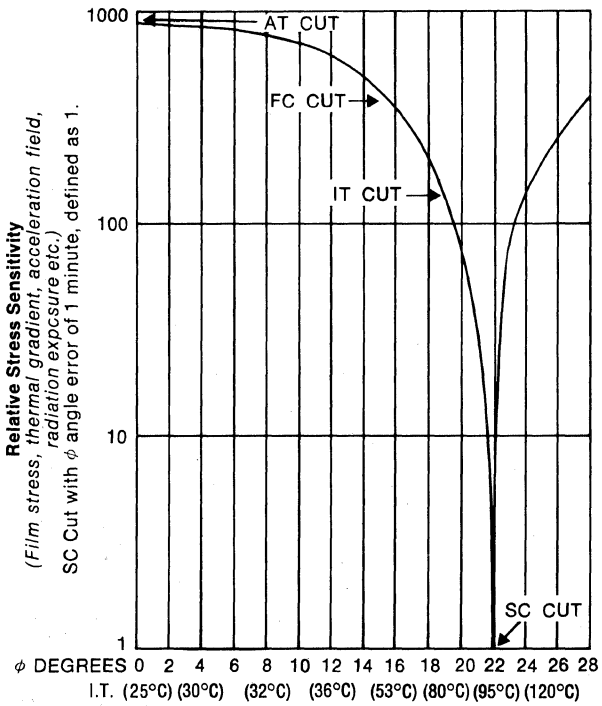
PRECISION SC CUT CRYSTALS

Relative Stress Sensitivity

Due to stress compensation in the SC cut crystal, the SC cut crystal is approximately 830 times less sensitive to certain stress effects upon frequency stability than are AT cut crystals.

Thermal Transient Effect versus ϕ (θ for zero temperature coefficient focus)



All CCC SC cut crystals are tested not only for turning point but also for Inflection Temperature to insure that our customers receive what they payed for.

Temperature stability enhanced, around the turning point, by a factor of 6

PUT THE FASTEST AND CLEANEST FREQUENCY SYNTHESIZERS INTO YOUR SYSTEM...10 MHz—18.4 GHz

The FS-2000 Family: Only from COMSTRON

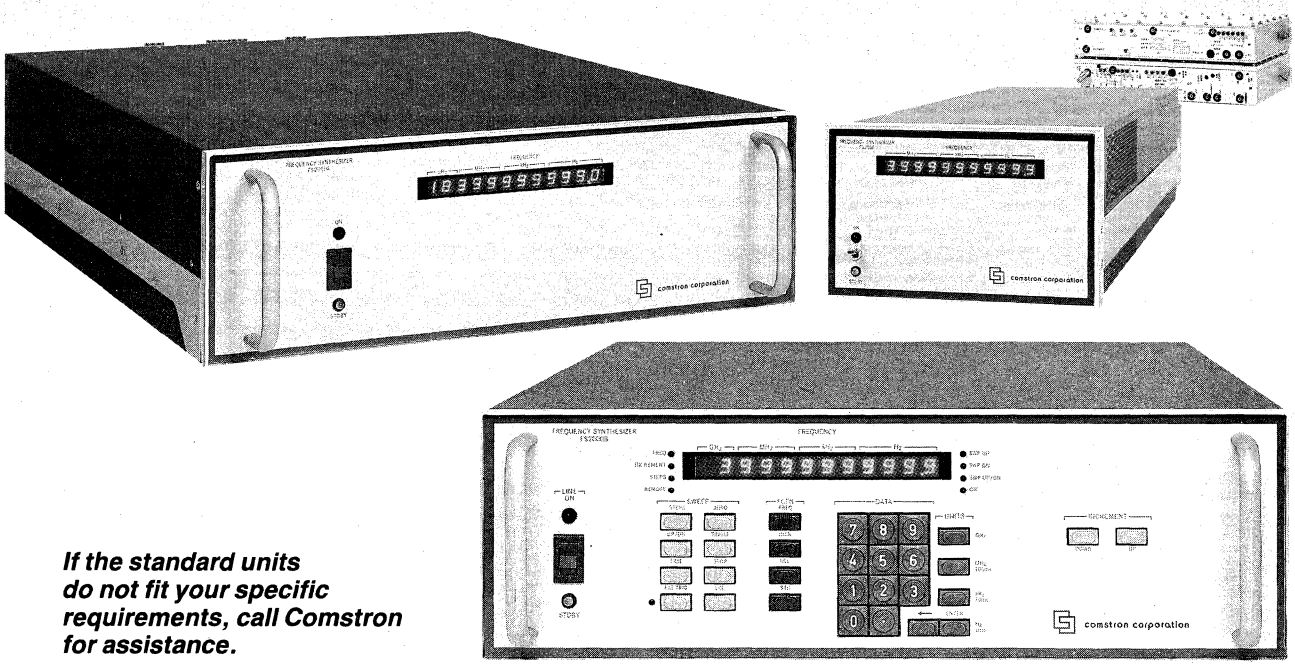
Comstron's FS-2000 is the most significant advance in Frequency Synthesizer technology in over 10 years. It is the first synthesizer to combine ultra fast switching, low phase noise, and low spurious over a wide frequency range.

The FS-2000 frequency synthesizers have uncompromising performance. Switching speed is specified simply; <1 microsecond between any two frequencies with any resolution — no ifs, ands, or buts.

Close-in spectral purity is virtually that of the frequency reference multiplied to the output frequency, while far-out noise decreases monotonically to the floor. No phase-locked loops, no complicated schemes. Just simple, direct, and reliable.

The Standard FS-2000 Family comprises 3 chassis (see photos below) and 4 frequency ranges:

- **10 MHz – 2.3 GHz**
- **10 MHz – 4.6 GHz**
- **10 MHz – 9.2 GHz**
- **10 MHz–18.4 GHz**



If the standard units do not fit your specific requirements, call Comstron for assistance.

Special Oscillator Features:

Dual Frequency Oscillators: C-W's Dual Frequency oscillators combine two individual unique frequencies into a single 14-pin DIP. The DF models can be provided with outputs in TTL, CMOS or HCMOS logic. In HCMOS logic, both fundamental and 3rd Overtone (24-50 MHz) frequencies can be provided in the same package. In all DF models, the higher of the two frequencies will be on pin 8, while the lower frequency will be on pin 1. The DF models are a great way to reduce space on a crowded board where two or more independent frequency signals are required.

Tri-State Gated Oscillator: Clock oscillator circuit design which uses a tri-state buffer for controlling the output of the oscillator. Applying logic "0" to pin 1 "enables" the oscillator, while applying logic "1" to pin 1 "disables" the output. However, when disabled, the output goes to the hi impedance state. When the oscillator has gone to the hi impedance state, it appears to have been removed from the circuit. A recently added option allows you to enable the oscillator by applying logic "1" to pin 1 while disabling the oscillator when applying logic "0" to pin 1, exactly the opposite of the above combination.

Dual Phase Oscillator: C-W's Dual Phase oscillators also provide two frequencies from the same 14-pin package. In contrast to the dual frequency models, the dual phase models emit two outputs at the same frequency; however, the two outputs are 180 degrees out of phase with each other. The primary output is on pin 8, while the second output (180 degrees out of phase with the primary output) is on pin 1. The DP models are available with output logics of either TTL or HCMOS.

Surface Mount Models: Most C-W metal DIP models are available with a gull-wing surface-mountable base. Gold plated, flat leads are used to enhance solderability and connection quality. Add J to the beginning of the base model number. (Not available in the stock frequency / low cost series models.)

HOW TO SPECIFY A QUARTZ CRYSTAL

If the parameters for the crystal in question are not already covered by a MIL-SPECIFICATION or by a formal SPECIFICATION CONTROL DRAWING, then Items 1 through 6 are essential.

(1) **MODE OF OPERATION** i.e. fundamental, third, fifth, seventh, ninth or eleventh overtone.
(2) **HOLDER STYLE** i.e. HC-6/u, HC-18/u, HC-35/u, etc, depending on your individual application and the frequency.
(3) **CALIBRATION TOLERANCE AT REFERENCE TEMPERATURE** i.e. ± 20 ppm @ + 25°C, ± 5 ppm @ + 75°C, etc.
(4) **TEMPERATURE STABILITY** the allowable frequency deviation over a specified temperature range, with reference to the actual frequency measured at the calibration temperature. (i.e. ± 15 ppm, ± 2.0 ppm, etc.)
OR TOTAL TOLERANCE the total allowable deviation over a specified temperature range, with reference to the nominal frequency (i.e. calibration tolerance and temperature stability combined). (i.e. ± 50 ppm, ± 30 ppm, etc.)
(5) **OPERATING TEMPERATURE RANGE** the temperature range over which the temperature stability or the total tolerance is to be effective.
(6) **CIRCUIT CONDITION** will be either PARALLEL or SERIES resonance. If PARALLEL resonance, please state the load capacitance.

SPECIFICATION CODING

We use a system whereby we code the major parameters of a crystal specification using a combination of 9 digits. A typical code would be **A251DFE-32** and would be interpreted as follows. **A** = fundamental mode, **25** = HC-25/U holder, **1** = undercut pins per MIL-H-10056, **D** = calibration tolerance of ± 10 ppm @ + 25°C, **F** = temperature stability of ± 20 ppm with reference to the actual frequency measured @ + 25°C, **E** = temperature range of — 15°C to + 65°C over which the temperature stability is effective, **-32** = a circuit condition of parallel resonance and with a load capacitance of 32 pF.

CTS Standard Microprocessor Crystals

CTS Knight offers 45 standard microprocessor crystals to use with many of the popular microprocessors on the market. CTS microprocessor crystals feature low start-up resistance. Reliability is assured by use of a MIL-approved Quality Control process. These are solder seal and resistance weld crystals with 0.5″ minimum lead lengths.

Microprocessor crystals are available as "off-the-shelf" items from authorized CTS distributors.

Top wires and/or insulating sleeving can be ordered special with minimal cost and leadtime.

Standard Tolerance is ±.01% at 25°C and ±.005% over 0 to 70°C.

MIL-Equivalent Crystals

MIL-C-3098G requires special testing to ensure compliance with the entire specification. Any crystal marked with the "CR" number must receive this testing.

If your required crystal details match those of a mil spec in general parameters, but your commercial application does not demand the exhaustive testing, you can order a mil equivalent crystal. The design will be the same. The crystal **will not** receive the detailed testing. Marking will be standard commercial marking. The "CR" number will not appear on the crystal.

A mil vs commercial cross reference is shown below:

Precision Quartz Crystal Resonators

I. DESCRIPTION

CTS High Stability Precision Resonators are used where specific tight parameter control is required. These crystals are used in communication, instrumentation, and military applications where specialized performance, documentation, or testing demands extra attention. These crystals are either calibrated at room temperature, or at elevated temperature for ovenized oscillator applications. Holder types see Fig. 8 and Fig. 9.

IV. MECHANICAL/ENVIRONMENTAL CAPABILITIES

A. MECHANICAL ENCLOSURES—CTS Knights uses flux-free sealing techniques (resistance weld and cold weld) for improved cleanliness, superior hermeticity, and long term reliability. CTS Knights manufactures crystals in 16 standard packages. One half inch hold-down wire (for mechanical support and/or grounding case) are available on the oval packages.

If your application requires V_{DD} to be other than 5 VDC, please specify nominal V_{DD}, when ordering, to insure proper frequency accuracy and stability.

Surface Mount Hybrid Clock Oscillators

■ SURFACE MOUNT APPLICATIONS—CTS Knights presently offers a number of options to suit your surface mount needs. Besides the CCXO series, leadless chip carriers, we are offering the MXO-55 style package in an economical surface mountable configuration, through a simple lead formation operation. The surface mount option is specified by adding an "S" to the part number (eg. SMXO-55, SCXO-65).

■ VAPOR PHASE REFLOW—CTS Knights' standard hybrid oscillators are capable of withstanding hand and wave soldering processes, but are not manufactured to survive vapor phase reflow profiles without degradation to device reliability. All surface mountable products are built with a special, high-temperature construction process to allow vapor phase reflow.

SPECIAL REQUIREMENTS

- ELECTROMAGNETIC INTERFERENCE PROTECTION
  The metal package construction, used extensively on CTS Knights hybrid oscillators, effectively reduces radiated EMI due to the oscillator circuitry. Further reduction can be accomplished by connecting the case to circuit ground, which is standard on MXO and CXO series oscillators. Case grounding is specified by a "G" in the part number (eg. MXO-55GA, CXO-65GA). CTS Knights has also gained considerable experience in reducing conducted EMI in specific customer applications. Contact CTS with your EMI problems or requirements, we'll offer a solution.
- CUSTOM DESIGN CAPABILITIES—CTS Knights' in-house capabilities include circuit design and artwork generation, crystal and hybrid thick film manufacturing facilities, manual and automated manufacture and test techniques, and mechanical and environmental testing. This gives CTS a unique flexibility to design and manufacture to your custom hybrid oscillator specifications. Consult the innovative staff at CTS Knights with your special requirements.

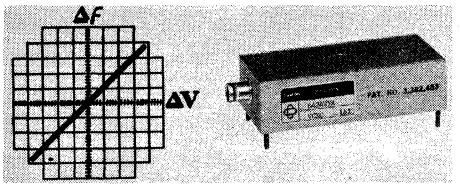
DAMON *THE FORM FACTOR SPECIALISTS*

VCXOs — 1 KHz to 500 MHz

Damon VCXOs provide high stability over a broad range of center frequencies. An optional square wave or pulse output signal compatible with I. C. logic circuits is available.

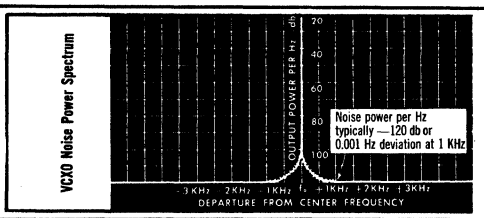


VCXO CHARACTERISTICS:

Center Frequency .. 1 KHz to 500 MHz
Deviation ..... .01% to 0.5% of Center Frequency
Linearity 1% to 5% of Peak Deviation
Frequency Stability .... Determined by Peak Deviation and Operating Temp.
Modulation Rates ..... DC to 2 MHz

Low Noise VCXOs

Damon low noise miniaturized VCXOs are all solid state quartz crystal stable oscillators whose frequencies can be varied linearly by an external DC or AC modulating signal. Only a source of power and control signal are required . . . no auxiliary compensating circuitry.

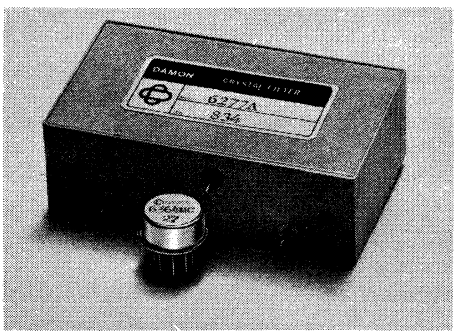


TYPICAL CHARACTERISTICS:

Center Frequency 10.000 MHz ±1 KHz
Deviation ..... ±10 KHz
Linearity ..... ±1%
Modulation Rate ..... Flat to 4 KHz
Output Power ..... >1 MW

Gaussian Crystal Filters

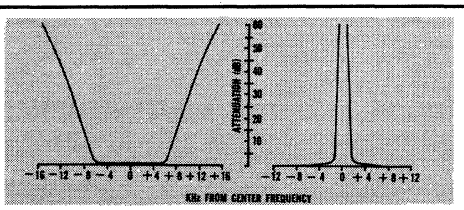
Gaussian Crystal Filters of either conventional or monolithic design. Useful in FM communications or radar systems where flat time delay is required. In a coherent pulsed radar, it can minimize return-pulse overshoot. Eliminates ringing problems in swept spectrum analysis. Available in 2 to 8 pole designs.



Center Frequency
Conventional ..... 10 KHz - 35 MHz
Monolithic ..... 3 - 30 MHz
3 dB Bandwidth ..... 100 Hz - 30 KHz
Shape Factor, 30 dB to 3 dB 3:1 to 7:1
Ringing, Pulse or Impulse 25 - 50 dB down
Phase Linearity ..... ±2%
No. of Poles
Conventional ..... 2 - 8
Monolithic ..... 2 - 4
Volume
Conventional ..... 1 - 6 cu. in.
Monolithic ..... 0.016 - 0.4 cu. in.

Band-Pass/Reject Crystal Filters

A wide variety of conventional crystal filters are produced at Damon. Standards designs such as Butterworth, Chebyshev, Gaussian, Bessel, and Legendre, as well as custom tailored designs are available.

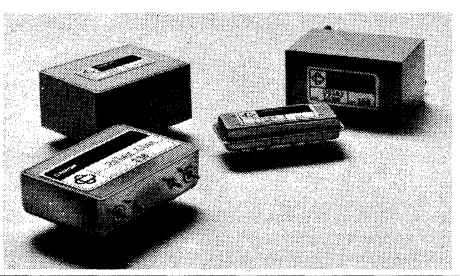


RANGE OF PARAMETERS:

Center Frequency .... 10 KHz - 75 MHz
Bandwidth ..... .01% - 3% of C.F.
Shape Factor ..... Down to 1.2:1
Differential Phase Shift ..... ±2°
Group Delay Uniformity ..... ±5%

Surface-Wave Delay Lines

With signal transfer **across** the surface instead of through the body (a state-of-the-art development), the new Surface-Wave concept results in substantially smaller packages, lower cost in production quantities and superior performance over a 20 MHz to 300 MHz range.

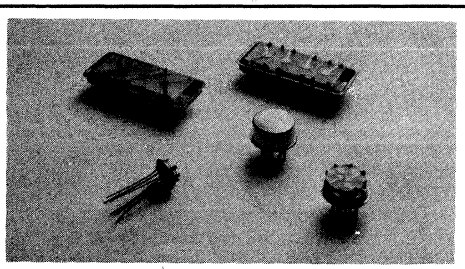


RANGE OF PARAMETERS:

Frequency Range .. 20 MHz - 300 MHz
Time Delay Range 0.5 - 20 Microsecs.
Bandwidth at −3 dB ..... 3% - 30% of Center Frequency
Insertion Loss ..... 10 - 20 dB
Spurious Responses 25 - 30 dB below Desired Response
Environment ..... Full Military Temp., Shock, Vibration Available
Typical Size ..... < 1 cu. in.

Monolithic Crystal Filters

Damon Monolithic Filters utilize a single quartz plate for multiple resonators and the coupling medium between them. Advantages over conventional crystal filters include smaller size, superior stability, and lower cost. Available in a wide variety of computer-assisted designs from Chebyshev to Gaussian characteristics and from 2 to 8 poles.



MONOLITHIC CHARACTERISTICS:

Center Frequency ..... 2.5 - 30 MHz
3 dB Bandwidth ..... 0.3 - 30 KHz

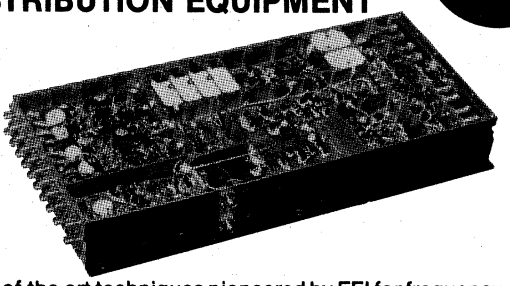
SATELLITE FREQUENCY GENERATION AND DISTRIBUTION EQUIPMENT



State-of-the-art techniques pioneered by FEI for frequency synthesis, processing, and distribution of low noise reference signals have been applied to the development of high reliability hardware for satellite applications. FEI systems consisting of precision oscillators and distribution equipment configured as redundant assemblies are presently being used on a wide variety of space programs resulting in performance capabilities previously unrealizable. The equipment incorporates FEI's high reliability hybrid techniques and results in light weight and low power consumption; considerations of primary importance in satellite applications.

from **FSN** **FREQUENCY SELECTIVE NETWORKS, INC.**

FSN is a filter and network house. We are strong in engineering. We are able and willing to work with system designers to apply state-of-the-art filter technology to optimize not just the filter but the application of filters to help our customers optimize their systems.

Use us as your filter specialist. We are knowledgeable in and have experience with all classes of filters, whether crystal or LC. We can select the proper type for best performance while optimizing the cost-vs-performance trade-off. We design and manufacture **all** the families such as: Butterworth, Chebyshev, Legendre, Cauer (elliptical), General Parameter, Gaussian, Bessel, Transitional Butterworth-Thompson (TBT), Bode, Lerner and others.

We also design and manufacture such other networks as delay lines, attenuators, phase and delay equalizers, discriminators, matching networks, etc.

SPECIAL PRODUCTS

This department of McCoy offers a number of unique services and products outside of the normal frequency control type of device. One such service is chemically milled items such as plating masks and looping carriers. McCoy technicians can fabricate the necessary artwork or use customers supplied photo ready material. Rubyliths are cut at 100:1 and a photo lab step and reject system with fully automatic film development result in optimum results. Quick deliveries are typically achieved because all work is performed in-house. Materials chemical milled at McCoy include copper, brass, phosphor bronze, beryllium copper and both shim and blue steel. Other products made by for outside sale include printed circuit boards, chemical plating, fabricated metal enclosures and custom designed hybrid thick film circuits for our own in-house fabrication facilities.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

Major manufacturers of commercial and military products have re-discovered the advantages of relying on American small businesses, such as M-tron Industries, Inc., which are both horizontally and vertically integrated. M-tron's location, skilled employees, and facilities provide an extremely reliable and cost effective resource on behalf of OEMs who are facing ever increasing demands for higher reliability, cost reduction, and increased functionality in an ever shrinking physical space.

COMMERCIAL PRODUCTS

M-tron's reliability in serving its extremely diverse customer base is derived from our ability to provide the advantages of multiple sourcing — combining production in Yankton, South Dakota, with that of our controlled offshore sources. Standard crystals and oscillator products are available locally from over 125 stocking distributors worldwide and also from inventories maintained at the factory.

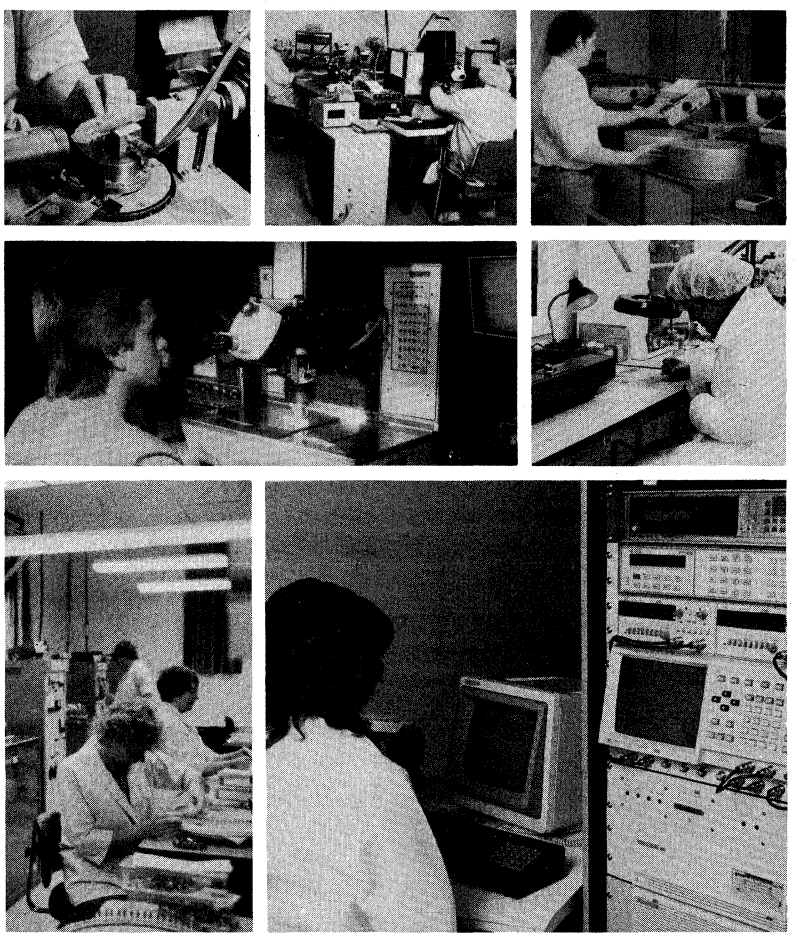
ENGINEERED PRODUCTS

M-tron has been a prime source of high performance commercial and military components for two decades. M-tron's engineering personnal are always accessible to customer counterparts with respect to applications assistance and non-standard design requirements.

FACILITIES

M-tron's two Yankton facilities house 25,000 square feet of manufacturing space. Separate isolated lines are devoted to production of military and high-performance commercial products, high volume standard commercial products, thick film hybrids, and facilities dedicated to pilot production of customer devices.

The Quality of Our Products is Based on The Quality of Our People



QUALITY ASSURANCE SYSTEMS

Half of M-tron's technical personnel are devoted full time to M-tron's comprehensive approach to maintaining the highest QA standards. Wherever appropriate, production is subject to Statistical Process Control (SPC) and lot inspection techniques, with 100% inspection of final product. M-tron maintains conformance to all applicable commercial and MIL standards.

The following QC procedures are invokable by customers: Traceability; Group B, C, and D testing; Failure analysis; Source inspection; non-destructive bond pull; Process documentation; QPL Listings; Qualification Environmental screening; and inspection by audit teams. M-tron welcomes inspection of our facilities and comprehensive audits.

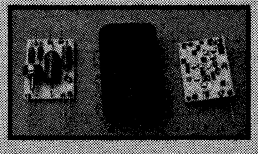
M-TRON COMMERCIAL AND MILITARY HYBRIDS

Consider M-tron's commercial and military hybrid capabilities part of your development and manufacturing team. M-tron's expertise is available to customers as an extension of their own product development resources for assistance in planning and optimizing designs.



Currently in production at M-tron, the thick film hybrid timing modules used in airborne ordinance are a good example of M-tron's service to contractors' needs for reduction of costs without tradeoffs in performance.

Carried in pods onboard attack helicopters such as the McDonnell Douglas AH-64A, weapons systems using the M-433 and M-439 fuses are critical assets in close-combat situations. Technologies involved in manufacturing the M-433 and M-439 modules combine thick film hybrid techniques with surface mount technology and hand soldering. Volume production throughout requires continuous use of automatic test equipment (ATE). Critical timing components and precision machined parts require hand soldering in conformance with MIL-STD-1460. The completed modules are injection molded for extreme ruggedness and longevity when stored in extreme environments.

Ceramic Resonators

Murata Erie's ceramic resonators derive their frequency stability from mechanical vibration resulting from a piezoelectric effect in the ceramic material. They are particularly useful in applications where tight frequency tolerances are not required such as clock oscillators and audio tone generators. They are extremely reliable and low cost.

COMPACT CRYSTAL CLOCK OSCILLATOR — 1300 SERIES

NDK announces the development of a small size C-MOS oscillator to meet a variety of applications.

Features

Small sized package
(half size of the conventional)
L13.2 x W13.2 x H5.0 mm 8 pin DIP

Conventional type
L21.0 x W13.2 x H5.0 mm 14 pin DIP

Package is highly reliable and metal-sealed.
- Hermetically sealed
- Case grounding provided
- Stand off provided
- Countermeasures against EMI . . .
  Metal-sealed and case grounded

C-MOS is used as an active element, and also the characteristics have been improved.
- Low power consumption
- Quicker rise and fall time
  5, 7 and 10 ns available
- Sufficient fan out
  TTL 2 gates or 5 gates

Newly designed construction are withstand against drop & shock.
- Actual evaluation tests have verified sufficient resistivity against three natural drops onto a hard wooden board from the height of 75 cm. Resistivity against three natural drops from the height of 50 cm is one of guaranteed item. (Conventional models are resistant against 1000G or natural drop from the height of 30 cm.)

Widened frequency range of 28 KHz to 70 MHz in terms of both C-MOS/TTL levels.
(Conventional models frequency coverage is 4 to 20 MHz.)

A wide range of models are available for optimum oscillator selection. (Categorization by output level.)
- TTL/C-MOS compatible type: 1320, 1350 Series
- C-MOS compatible type: 1330 Series
- TTL compatible type: 1340 Series

Characteristics

Within a range of 3 to 25 MHz the following items are selectable:
- Electric current consumption
- Rise and fall time
- Output load (Fan out number)

With any series, either one of frequency stability ratios: ±50, ±100 ppm is selectable.

Optional features

Any Series has an optional standby function.
Model 1329 has an optional dual-output function. (However, in this case, the standby function is not available.)

3-S Series Clock Oscillators (Tri-State or Enable/Disable Clock Oscillators)

These "True" tri-state clock oscillators are fully HCMOS and TTL compatible. When the input at pin 1 is in "Enable State," the output at pin 8 is also in "Enable State" (normal). When the input at pin 1 is in "Disable State," the output at pin 8 is also in "Disable State" (high impedance). The input is normally disabled by grounding pin 1. Thus, with pin 8 in the high impedance condition, the unit is ready to receive test signals or to connect to alternative circuits.

Quality Hybrid Crystal Clock Oscillators

LOGIC FAMILIES: TTL, CMOS & HCMOS, & ECL

TTL

Standard TTL outputs can drive up to 10 TTL loads. Some Q-Tech clocks use low power Schottky (LS) dividers and gates to reduce internal power consumption. These units drive 2 TTL loads or 4 LS loads over the full military temperature range.

CMOS, HCMOS & "Z" DRIVERS

Q-Tech **"C"** type clock oscillators are compatible with the **high voltage, 4000 series CMOS** logic family. Frequencies from .01 Hz to 15 MHz and voltages from 5 volts to 15 volts are available.
The **"HC"** clock oscillators match the **High Speed CMOS** logic family. Q-Tech HC clocks produce **rail-to-rail** CMOS logic levels at frequencies to over 100 MHz. These units can drive one TTL load or high capacitance CMOS and NMOS loads.
Options available in the HC line include provisions for **special symmetry** option, a **low current** option for battery operation when the output frequency is below 100 KHz, and optional 10 TTL drive capability. Although normally run at 5.0 volts like TTL, HC clocks can operate down to 2.5 volts, with some restrictions on maximum frequency.
The **"Z"** type clock oscillators have **more power to drive very high capacitance loads.** Use "Z" designation in part number: e.g. QT6Z9M—12 MHz. This unit can drive 150 pF load with a typical 6 nanoseconds (ns) rise & fall times (t_r, t_f).
Extra outputs, gates and special digital functions can often be included, at low cost.

***Higher drive capabilities available.

ECL

The **ECL logic family** is characterized by **very high speed** (clocks available to 140 MHz.) Q-Tech ECL clocks use MECL* 10K series output gates for compatibility with most ECL systems.
ECL components typically use a negative **Vcc of −5.2 Volts D.C.**, referenced to ground pin. For example, the Q-Tech QT48 package, built as an ECL clock, would use −5.2 Volts on pin 7 ("Vcc") and ground on pin 14. Other pin configurations are also available.
2 new ECL options are available (QT6E1 and QT41E1 series) with quick delivery on standard frequencies. For more information, request bulletin **ECL.**

Available Features:

1. Full Military Temperature range
2. Low output impedance for driving three ECL loads (50 OHMS terminated at −2 Volts D.C.)
3. Internal bias (Vbb) available on a pin
4. Low cost commercial version (request bulletin ECL)
5. A.C. coupled output for r.f. applications
6. Custom clocks with gates, complementary outputs, etc.

Frequency ranges from 20 MHz to 550 MHz. Consider the following features: phase locked option, low spurious and harmonic outputs and phase noise data available. For full details please request bulletin ***UVS.***

VCXO'S

Q-Tech ***Voltage Controlled Crystal Oscillators*** can be ***"frequency shifted"*** or ***"controlled"*** by means of an external voltage source. Often used to phase lock a clock to a master frequency source, a typical "pulling" (frequency shift) range is ±100 PPM (±.01%) for a control voltage range of 5 Volts. Consult factory for other range/capabilities. Also consider packaging your phase locked loop dividers, phase detector and loop amplifier in one custom hybrid to reduce cost and space. For full details please request bulletin ***VCXO.***

ECL CLOCK OSCILLATORS

In addition to its complete line of ECL Clock Oscillators, Q-Tech now offers another version of unscreened and fast delivery ECL in 2 standard DIPS: ***QT6E1*** (14 pin DIP) and the ***QT41E1*** (4 pin DIP) ***series.*** These units operate at −5.2 Volts with a frequency range of 40 MHz to 110 MHz. For more details please request bulletin ***ECL.***

Versions are available with TTL, CMOS and/or NMOS output levels (as required). ***The QCM series clock drivers*** are available in both commercial and full MIL-spec designs. Q-Tech can provide drivers for almost all available microprocessors. For full details please request bulletin ***MCD.***

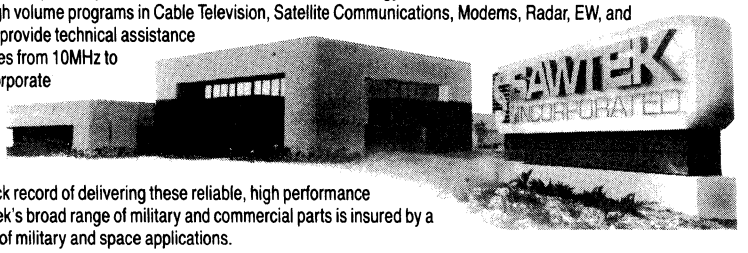
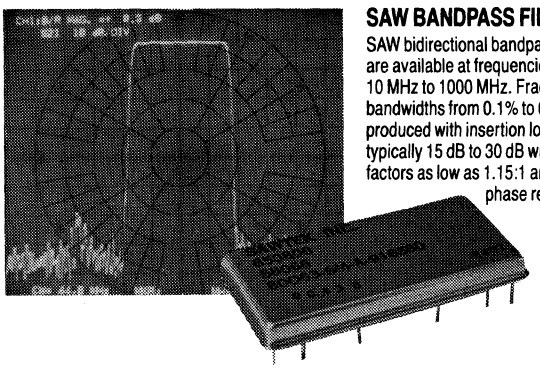
SURFACE ACOUSTIC WAVE TECHNOLOGY

provides performance advantages and design flexibility that have proven invaluable to engineers in need of reliable, reproducible components featuring linear phase, temperature stability, small size, or other SAW characteristics. Increasingly, SAW technology is meeting the exacting requirements of modern systems with high performance bandpass filters, resonator products, delay lines, and other state-of-the-art signal processing components. Sawtek offers the industry's broadest product line and provides the total engineering support needed to make the proper design trade-offs among key parameters in order to achieve the optimum performance available from SAW technology.

Sawtek produces hundreds of standard SAW products for both low and high volume programs in Cable Television, Satellite Communications, Modems, Radar, EW, and many other applications. In addition, Sawtek's custom design capability can provide technical assistance and rapid response to new design and production requirements at frequencies from 10MHz to more than 1GHz. Sawtek also designs and produces subsystems which incorporate SAW components. These include filter banks comprised of cascaded filters packaged in a single assembly, SAW resonator-controlled oscillators, and ovenized components.

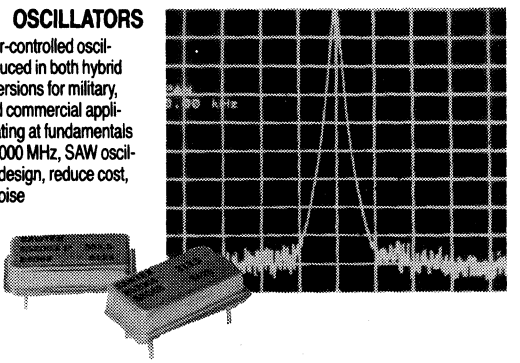


Sawtek maintains a leadership role in SAW technology through the development and production of superior SAW components and a proven track record of delivering these reliable, high performance products on time and at a very competitive price. Product reliability for Sawtek's broad range of military and commercial parts is insured by a watchful quality control program that meets even the exacting requirements of military and space applications.



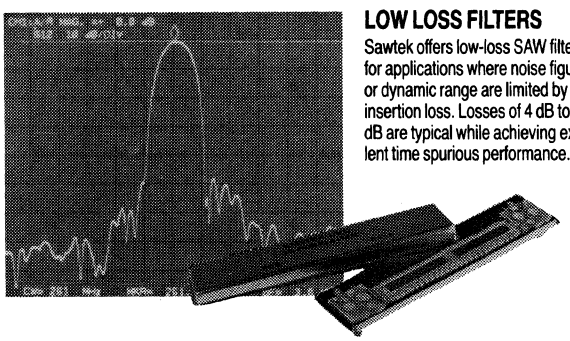
SAW BANDPASS FILTERS

SAW bidirectional bandpass filters are available at frequencies from 10 MHz to 1000 MHz. Fractional bandwidths from 0.1% to 65% are produced with insertion loss that is typically 15 dB to 30 dB with shape factors as low as 1.15:1 and linear phase response.



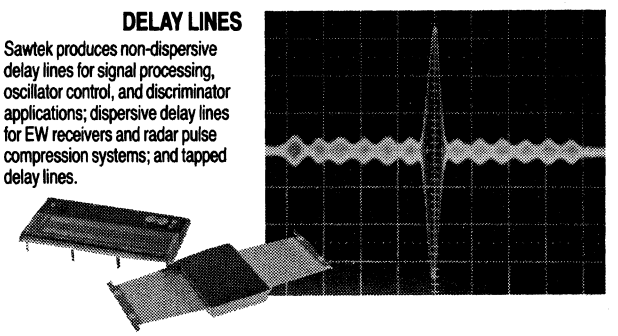
OSCILLATORS

SAW resonator-controlled oscillators are produced in both hybrid and discrete versions for military, aerospace and commercial applications. Operating at fundamentals to more than 1000 MHz, SAW oscillators simplify design, reduce cost, and improve noise performance through the elimination of multiplier stages.



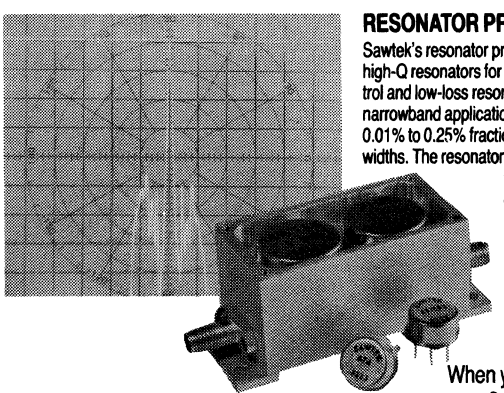
LOW LOSS FILTERS

Sawtek offers low-loss SAW filters for applications where noise figure or dynamic range are limited by filter insertion loss. Losses of 4 dB to 10 dB are typical while achieving excellent time spurious performance.



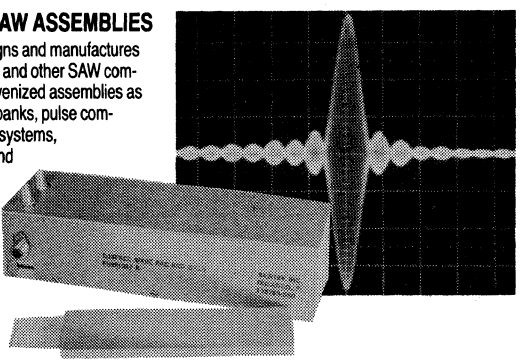
DELAY LINES

Sawtek produces non-dispersive delay lines for signal processing, oscillator control, and discriminator applications; dispersive delay lines for EW receivers and radar pulse compression systems; and tapped delay lines.



RESONATOR PRODUCTS

Sawtek's resonator products include high-Q resonators for oscillator control and low-loss resonator filters for narrowband applications requiring 0.01% to 0.25% fractional bandwidths. The resonator filters are provided in individual two-pole stages and in custom modules.



SAW ASSEMBLIES

Sawtek designs and manufactures RAC devices and other SAW components in ovenized assemblies as well as filter banks, pulse compression subsystems, oscillators, and specialized signal processing modules.

MGX0 SERIES OSCILLATORS

- ☐ 14 Pin DIP Compatible
- ☐ TCX0 Specs/Low Power
- ☐ Extremely Shock Resistant

The DS-MGX0 series oscillators use miniature GT cut crystal units (DS-MGQ) developed by SEIKO INSTRUMENTS. Their excellent frequency temperature characteristics (down to +2.5ppm over temperature) make the DS-MGX0 ideal for applications, such as cellular telephones to facsimile machines and computer designs.

The DS-MGX0 incorporates precision electrical adjustable capacitance (PEAC) elements verses the use of trimmer capacitors. PEACs are floating gate semiconductor elements that can vary internal capacitance by applying voltage to pin #1 (#3 for SM model). When not adjusting frequency, voltage can be removed and the PEAC maintains the capacitance setting. The PEAC coupled with the excellent temperature characteristics of the DS-MGQ enable +2.5ppm temperature stability over a wide temperature range.

Circuit Design

A conventional CMOS Pierce Oscillator is shown below. The crystal oscillates at a frequency f_O above the crystal's series-resonant frequency f_S. The crystal is effectively inductive and, in combination with R_A, C_D and C_G in the feedback loop, provides approximately 180° phase shift necessary to obtain oscillation. Typical component values for a Pierce Oscillator using a 16 MHz crystal with a 74HC04 hex inverter are shown below:

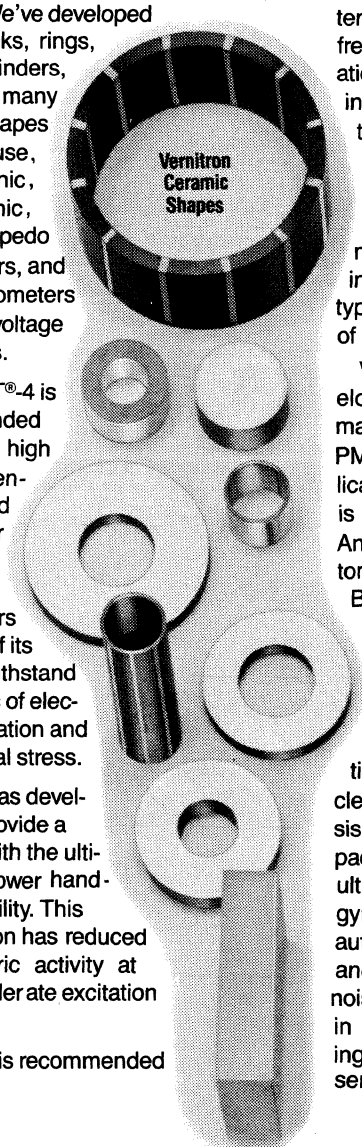
Electronic components and piezo ceramics by Vernitron. Over 45 years of innovation.

In piezo ceramics of diverse shapes. In Bimorphs and Unimorphs. Also in ceramic bandpass and ladder filters. In ceramic resonators. And in piezo igniters. That's Vernitron Piezoelectric Division.

We've been making innovations in electronic components and piezo ceramics since 1938. And we're still doing it. Take a look at some of our accomplishments in modern ceramic shapes. We've developed discs, blocks, rings, plates, cylinders, tubes and many custom shapes for sonar use, as ultrasonic, hydrophonic, and as torpedo transducers, and in accelerometers and high voltage generators.



Our PZT®-4 is recommended for use in high voltage generators and high power acoustic radiating transducers because of its ability to withstand high levels of electrical excitation and mechanical stress.

PZT-8 was developed to provide a material with the ultimate in power handling capability. This composition has reduced piezoelectric activity at low to moderate excitation levels.

PZT-5A is recommended for use in receiver or generator type transducers such as hydrophones, fuses, accelerometers, and vibration pickups in general etc., because of its high sensitivity, permittivity and time stability.

PZT-5H is better suited to low frequency applications because of increased permittivity, accompanied by a reduced Curie point.

The family of PZT-5 materials may also serve in very low power motor-type transducers because of high motion sensitivity.

Vernitron also has developed lead metaniobate materials, PMN-1 and PMN-2, for diverse applications. Their feature is higher Curie points. And we are the originators of Unimorphs and Bimorphs to serve as compact transducers for audio tones.

The above compositions are used in such applications as ultrasonic cleaners, kidney dialysis equipment, heart pacemakers, ink jets, ultrasound scanners, gyros, sonobuoys, automatic erasers and a variety of noisemakers. Also in laser positioning and as motion sensors.

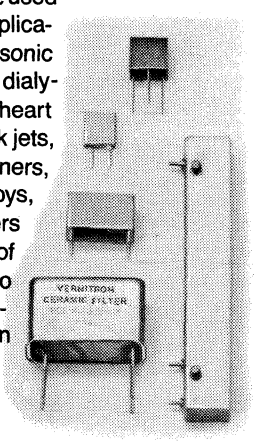
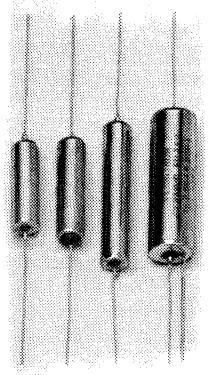
Bandpass Filters and Resonators



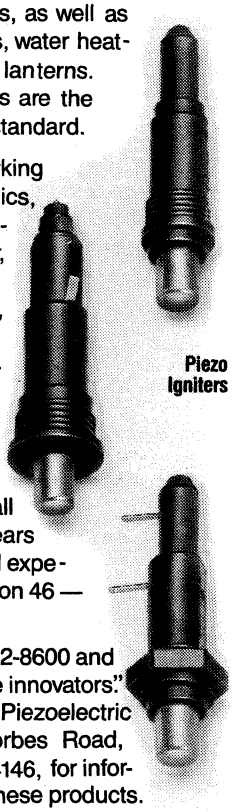
Innovation is also true of our work in bandpass filters, ladder filters, and ceramic resonators. We offer light weight, stable, fixed tuned, miniature ceramic filters and resonators with varieties for almost any kind of communications equipment:

consumer —
commercial —
military.

Ceramic Ladder Filters



And don't overlook what we've done in piezo igniters for gas fired equipment of all types. Vernitron igniters are original equipment in most makes of barbeque grills, as well as in many furnaces, water heaters and camping lanterns. Vernitron igniters are the world industry standard.



Piezo Igniters

So if you're working with piezo ceramics, in alarms, speakers, lasers, sonar, ink jet printing data processing, communications, telephone development, gyros, or hydrophones, pacemakers or gas-fired equipment give us a call and put our 45 years of innovation and experience — going on 46 — to work.

Just call (216) 232-8600 and ask for "one of the innovators." Or write Vernitron Piezoelectric Division, 232 Forbes Road, Bedford, Ohio 44146, for information on any of these products.

ADVANCED DESIGN MICROCIRCUIT CRYSTAL OSCILLATORS

XSIS ELECTRONICS

XSIS Electronics advanced-design microcircuit crystal oscillators

Expanded manufacturing and test facilities coupled with continuing consistency in the quality of workmanship and a nearly perfect on-time delivery history provide customers with a high degree of confidence. Many call it "experienced reliability".

All products, TTL, CMOS, FAST CMOS, ECL and gated are 100% tested for all electrical parameters over the operating temperature range. In-house capabilities include not only automated temperature range testing but also PIND test, destructive, non-destructive bond pull test, automatic temperature cycling, fine and gross leak check, die shear test and constant acceleration. XSIS also monitors and controls the parameters and processes of the quartz crystal. Custom designs for CMOS output up to 30.0 MHz are now available. ECL oscillators with either 10 KH or 100K compatibility up to 150 MHz are also available. Please consult our engineering department for more information on these devices.
